BIOLOGICAL ACTIVITY

Description	Oseltamivir (GS 4104) is an orally active influenza virus neuraminidase inhibitor (NAI). Oseltamivir inhibits influenza A/H3N2, A/H1N2, A/H1N1, and B viruses with mean IC ₅₀ s of 0.67, 0.9, 1.34 and 13 nM, respectively ^[1] .
In Vivo	Oseltamivir (20 mg/kg/day, p.o., twice daily for 10 days) prevented death in the H1N1pdm virus infection in mice ^[2] . Oseltamivir (10 mg/kg/day, oral gavage, 5 days) together with Amantadine (HY-B0402) (15 or 30 mg/kg) has greater protection efficiency against H5N1 influenza virus infection in mice than monotherapy ^[3] . Oseltamivir is also used together with Ribavirin (HY-B0434), or Favipiravir (HY-14768), or Peramivir (HY-17015A) to prevent influenza virus infection in mice ^{[4][5]} . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
