

Amiodarone-d₅ hydrochloride

Cat. No.:	HY-14187S1
Molecular Formula:	C ₂₅ H ₂₅ D ₅ ClI ₂ NO ₃
Molecular Weight:	686.8
Target:	Autophagy; Potassium Channel; Isotope-Labeled Compounds
Pathway:	Autophagy; Membrane Transporter/Ion Channel; Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

HCl

BIOLOGICAL ACTIVITY

Description	Amiodarone-d ₅ hydrochloride is deuterated labeled Amiodarone (HY-14187). Amiodarone is an antiarrhythmic agent for inhibition of ATP-sensitive potassium channel with an IC ₅₀ of 19.1 μM.
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
