BIOLOGICAL ACTIVITY

Description	Bedaquiline (TMC207) is a diarylquinoline agent and inhibits Mycobacterium tuberculosis (Mtb) F1FO-ATP synthase through targeting of both the c- and the ε-subunit ^[1] . Bedaquiline has uncoupler activity. Bedaquiline is used for the multi-agent resistant tuberculosis ^[2] .
IC ₅₀ & Target	Mtb F1FO-ATP synthase ^[1]
In Vitro	Bedaquiline inhibits the growth of TDR M. tuberculosis strains, with MIC values ranging from 0.125 to 0.5 mg/L ^[2] .

Among slowly growing mycobacteria (SGM), bedaquiline exhibits the highest activity against *Mycobacterium avium* with MIC₅₀ and MIC₉₀ values of 0.03 and 16 mg/L, respectively. Among rapidly growing mycobacteria (RGM), *Mycobacterium abscessus* subsp. *abscessus* (*M. abscessus*) and *Mycobacterium abscessus* subsp. *massiliense* (*M. massiliense*) seem more susceptible to bedaquiline than *Mycobacterium fortuitum*, with MIC₅₀ and MIC₉₀ values of 0.13 and >16 mg/L, respectively, for both species. Bedaquiline also shows moderate in vitro activity against NTM species^[3].

Bedaquiline has an excellent in vitro activity against *Mycobacterium tuberculosis*, including multidrug resistant *M. tuberculosis*^[4].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
