## BIOLOGICAL ACTIVITY

Description	CHAPS, a derivative of Cholic acid, is a zwitterionic detergent for solubilizing membrane proteins. CHAPS is used for stabilization of various protein-DNA complexes and can retain biochemical activity of proteins in solution <sup>[1][2]</sup> .
In Vitro	CHAPS (0.5 %) is able to stabilize complexes between DNA and DNA-binding factors such as AP-1, SPI, GATA-1 and α-regulated factor ISGF3, and retains their biochemical activity <sup>[2]</sup> . CHAPS can prevent dissociation of mononucleosomes diluted to sub-nanomolar concentrations <sup>[2]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
