

DSPE-PEG-Amine, MW 5000 ammonium

Cat. No.:	HY-155907
CAS No.:	474922-26-4
Molecular Formula:	$(C_2H_4O)_nN_2O_{10}P.NH_3$
Target:	Liposome
Pathway:	Metabolic Enzyme/Protease
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description

DSPE-PEG-Amine, MW 5000 (ammonium) is a phosphoethanolamine involved in the synthesis of liposomes for delivery systems. DSPE-PEG-Amine, MW 5000 (ammonium) amino group can be converted to aromatic aldehydes that react with acetone-protected aromatic hydrazides on the surface of the bovine carbonic anhydrase (BCA) molecule. Liposomes produce liposome-Bah-BCA conjugates by forming diaryl hydrazone (BAH) with target enzyme molecules. The conjugate catalyzes the hydration of carbon dioxide to bicarbonate.
