

## Amikacin hydrate

Cat. No.:	HY-B0509
CAS No.:	1257517-67-1
Molecular Formula:	$C_{22}H_{43}N_5O_{13} \cdot xH_2O$
Target:	Bacterial; Antibiotic
Pathway:	Anti-infection
Storage:	4°C, sealed storage, away from moisture * In solvent : -80°C, 6 months; -20°C, 1 month (sealed storage, away from moisture)

### SOLVENT & SOLUBILITY

In Vitro	H <sub>2</sub> O : 50 mg/mL (Need ultrasonic) DMSO : < 1 mg/mL (insoluble or slightly soluble)
----------	---

### BIOLOGICAL ACTIVITY

Description	Amikacin hydrate (BAY 41-6551 hydrate) is an aminoglycoside antibiotic and a semisynthetic analog of kanamycin. Amikacin hydrate is bactericidal, acting directly on the 30S and 50S bacterial ribosomal subunits to inhibit protein synthesis. Amikacin hydrate is very active against most Gram-negative bacteria including gentamicin- and tobramycin-resistant strains. Amikacin hydrate also inhibits the infections caused by susceptible <i>Nocardia</i> and nontuberculous mycobacteria <sup>[1][2]</sup> .	
IC <sub>50</sub> & Target	Aminoglycoside	
In Vitro	Amikacin offers definite advantages for treating infections caused by organisms resistant to other aminoglycosides. Amikacin is affected by relatively few aminoglycoside-modifying enzymes. Amikacin is useful in the treatment of infections caused by <i>Nocardia asteroides</i> , <i>Mycobacterium avium-intracellulare</i> , and certain species of "rapid-growing" mycobacteria (that is, <i>M. chelonae</i> and <i>M. fortuitum</i> ) <sup>[1]</sup> . Amikacin (100-1500 µM) causes a reliable dose-dependent loss of lateral line zebrafish hair cells with a LD <sub>50</sub> value of 453 µM <sup>[3]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.	
In Vivo	Amikacin (320 mg/kg; subcutaneous injection; daily; for 10 days; male Fischer rats) treatment increases the chance of serious hearing loss in rats in vivo <sup>[3]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.	
	Animal Model:	Male Fischer 344 rats (40-50-day-old) <sup>[3]</sup>
	Dosage:	320 mg/kg
	Administration:	Subcutaneous injection; daily; for 10 days
	Result:	Induced hearing loss in rats.

---
