Product Data Sheet

Salbutamol-d₉

 Cat. No.:
 HY-B1037S2

 CAS No.:
 1173021-73-2

 Molecular Formula:
 C₁₃H₁₂D₉NO₃

Molecular Weight: 248.37

Target: Adrenergic Receptor; Isotope-Labeled Compounds

Pathway: GPCR/G Protein; Neuronal Signaling; Others

Storage: Please store the product under the recommended conditions in the Certificate of

Analysis.

BIOLOGICAL ACTIVITY

Description	Salbutamol- d_9 is the deuterium labeled Salbutamol. Salbutamol is a short-acting β 2-adrenergic receptor agonist used for the relief of bronchospasm in conditions such as asthma and chronic obstructive pulmonary disease (COPD).
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
