

CXCL16 Protein, Mouse (His)

Cat. No.:	HY-P700548
Synonyms:	C-X-C motif chemokine 16; SR-PSOX; Srpsox; SCYB16; CXCL16
Species:	Mouse
Source:	E. coli
Accession:	Q8BSU2 (N27-T198)
Gene ID:	66102
Molecular Weight:	22.7 kDa

PROPERTIES

AA Sequence	<p> N Q G S V A G S C S C D R T I S S G T Q I P Q G T L D H I R K Y L K A F H R C P F F I R F Q L Q S K S V C G G S Q D Q W V R E L V D C F E R K E C G T G H G K S F H H Q K H L P Q A S T Q T P E A A E G T P S D T S T P A H S Q S T Q H S T L P S G A L S L N K E H T Q P W E M T T L P S G Y G L E A R P E A E A N E K Q Q D D R Q Q E A P G A G A S T </p>
Appearance	Lyophilized powder.
Formulation	Lyophilized from a 0.2 µm filtered solution of Tris/PBS-based buffer, 6% Trehalose, pH 8.0.
Endotoxin Level	<1 EU/µg, determined by LAL method.
Reconstitution	It is not recommended to reconstitute to a concentration less than 100 µg/mL in ddH ₂ O.
Storage & Stability	Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.
Shipping	Room temperature in continental US; may vary elsewhere.

DESCRIPTION

Background	<p>The CXCL16 protein exhibits multifaceted functionalities, including the induction of a robust chemotactic response and the initiation of calcium mobilization. Functioning as a ligand, it binds to CXCR6/Bonzo, thereby contributing to cellular signaling processes. Beyond its role as a chemotactic factor, CXCL16 serves as a scavenger receptor on macrophages, displaying a specific affinity for oxidized low-density lipoprotein (OxLDL). This interaction suggests its potential involvement in pathophysiological processes, particularly atherogenesis, where the recognition and clearance of OxLDL by macrophages play a crucial role. The diverse activities of CXCL16 highlight its versatility and underscore its potential implications in cellular responses and pathological conditions.</p>
