

Sodium carboxymethyl cellulose (Viscosity:5000-15000 mPa.s)

Cat. No.:	HY-Y1889		
CAS No.:	9004-32-4		
Target:	Biochemical Assay Reagents		
Pathway:	Others		
Storage:	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	6 months
		-20°C	1 month

Sodium carboxymethyl cellulose (Viscosity:5000-15000 mPa.s)

SOLVENT & SOLUBILITY

In Vitro	H ₂ O : 6.25 mg/mL (Need ultrasonic)
-----------------	---

BIOLOGICAL ACTIVITY

Description Sodium carboxymethyl cellulose (Viscosity:5000-15000 mPa.s) is the sodium salt of cellulose arboxymethyl and frequently used as viscous agent, paste and barrier agent.

In Vivo

Protocol for preparing 0.5% CMC-Na Solution
 Measure 0.5g of dry CMC-Na and dissolved in 100 ml ddH₂O/0.9% Saline (0.9 g NaCl in 100 ml ddH₂O) to make a clear solution.
 Under the condition of stirring and heating (50-65°C), adding CMC-Na slowly to ddH₂O/0.9% Saline helps to accelerate dissolution.

Note

- You must ensure that your CMC-Na solution does not exist solid-liquid separation phenomenon. The solution is in a uniform and transparent state has no particles in it.
- Completely dissolution of CMC-Na may requires 4 hours or more longer.

In a pharmacological test, CMC-Na (oral;5% in water; 1 year) is well tolerated in rats^[2].
 In an acute oral toxicity study in female mice, LD₅₀ of CMC-Na for female mice is 14 g/kg body weight of mice, equivalent to 9.8 g/kg body weight of rat, categorized as practically non-toxic according to Loomis criteria (LD₅₀ 5-15g/kg body weight of rat)^[3].
 MCE has not independently confirmed the accuracy of these methods. They are for reference only.
