BIOLOGICAL ACTIVITY

Description

4-IBP is a selective σ_1 agonist with a high level of affinity for the σ_1 receptor ($K_i = 1.7$ nM) and a moderate affinity for the σ_2 receptor ($K_i = 25.2$ nM). IC₅₀ value: 1.7 nM (K_i) Target: σ_1 in vitro: 4-IBP is a σ_1 receptor agonist, decreases the migration of human cancer cells, including glioblastoma cells. 4-IBP is used to investigate whether targeting the σ_1 receptor could modify in vitro the migration rates of human cancer cells and increase the sensitivity of metastasizing human A549 NSCLC cells and infiltrating human glioblastoma cells to cytotoxic insults of either proapoptotic or proautophagic drugs.[1] in vivo: 4-IBP increases the antitumor effects of temozolomide and irinotecan in immunodeficient mice that were orthotopically grafted with invasive cancer cells.[1]
