

## DHBP dibromide

<b>Cat. No.:</b>	HY-101237		
<b>CAS No.:</b>	6159-05-3		
<b>Molecular Formula:</b>	C <sub>24</sub> H <sub>38</sub> Br <sub>2</sub> N <sub>2</sub>		
<b>Molecular Weight:</b>	514.38		
<b>Target:</b>	Calcium Channel		
<b>Pathway:</b>	Membrane Transporter/Ion Channel; Neuronal Signaling		
<b>Storage:</b>	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	6 months
		-20°C	1 month

### SOLVENT & SOLUBILITY

#### In Vitro

H<sub>2</sub>O : 100 mg/mL (194.41 mM; Need ultrasonic)  
 DMSO : ≥ 30 mg/mL (58.32 mM)  
 \* "≥" means soluble, but saturation unknown.

	Solvent Concentration	Mass		
		1 mg	5 mg	10 mg
Preparing Stock Solutions	1 mM	1.9441 mL	9.7204 mL	19.4409 mL
	5 mM	0.3888 mL	1.9441 mL	3.8882 mL
	10 mM	0.1944 mL	0.9720 mL	1.9441 mL

Please refer to the solubility information to select the appropriate solvent.

### BIOLOGICAL ACTIVITY

#### Description

DHBP dibromide is an inhibitor for calcium release and a muscle relaxant.

#### In Vitro

DHBP inhibits the calcium release induced by 2 mM caffeine and 2 µg/mL polylysine with an IC<sub>50</sub> value of 5 µg/mL and 4 µg/mL, respectively. DHBP inhibits [<sup>3</sup>H]-ryanodine binding in a dose-dependent manner with an IC<sub>50</sub> of 2.5 µg/mL and 90-100% inhibition at 20-30 µg/mL. Calcium uptake by SR is inhibited in the presence of caffeine and this inhibition is antagonized by concomitant addition of DHBP. Muscle twitches elicited by direct electrical muscle stimulation and contractions induced by either 10 mM caffeine or 1 fLM ryanodine are blocked by pretreatment with DHBP. DHBP blocks the calcium release from SR by direct interaction with the calcium release channel, also known as the ryanodine receptor<sup>[1]</sup>. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
