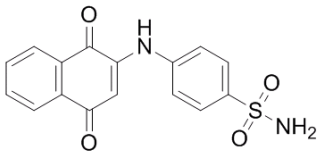
ML329

Cat. No.:	HY-101464
CAS No.:	19992-50-8
Molecular Formula:	$C_{16}H_{12}N_2O_4S$
Molecular Weight:	328.34
Target:	Others
Pathway:	Others

Storage:

Powder	-20°C	3 years
	4°C	2 years
In solvent	-80°C	6 months
	-20°C	1 month



SOLVENT & SOLUBILITY

In Vitro

DMSO : ≥ 31 mg/mL (94.41 mM)

* "≥" means soluble, but saturation unknown.

Preparing Stock Solutions

Solvent / Mass / Concentration	1 mg	5 mg	10 mg
1 mM	3.0456 mL	15.2281 mL	30.4562 mL
5 mM	0.6091 mL	3.0456 mL	6.0912 mL
10 mM	0.3046 mL	1.5228 mL	3.0456 mL

Please refer to the solubility information to select the appropriate solvent.

BIOLOGICAL ACTIVITY

Description

ML329 is a micropthalmia-associated transcription factor (MITF) inhibitor, which inhibits TRPM-1 promoter activity with an IC_{50} of 1.2 μM.

IC_{50} & Target

IC50: 1.2 μM (TRPM-1)[1]

In Vitro

ML329 inhibits the expression of numerous micropthalmia-associated transcription factor (MITF) target genes and blocks the proliferation of numerous cell lines that require MITF for proliferation. ML329 could directly or indirectly interact with MITF or components of the MITF regulatory network. As a transcription factor that regulates cell cycle and pigmentation, interference of MITF with ML329 will be useful in characterizing the specific roles of MITF in melanoma and validate blockade of MITF function as a potential treatment of melanoma. ML329 shows specific activity against the MITF-dependent cells, primary melanocytes but no effect on the viability in A375 cells. ML329 reduces the expression of multiple MITF target genes, including pigment-related genes and the cell cycle regulator CDK2. As a tool compound, ML329 will be useful in elucidating the role of MITF in melanocyte lineage development and in melanoma disease progression[1].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
