

Etersalate

Cat. No.:	HY-101606
CAS No.:	62992-61-4
Molecular Formula:	C ₁₉ H ₁₉ NO ₆
Molecular Weight:	357.36
Target:	Prostaglandin Receptor
Pathway:	GPCR/G Protein
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Etersalate inhibits platelet function and decreases thromboxane A ₂ (TXA ₂) levels.
IC ₅₀ & Target	TXA ₂
In Vitro	Ex vivo antiplatelet properties of Etersalate and its effects on serum thromboxane A ₂ (TXA ₂) levels and prostaglandin I ₂ (PGI ₂) generation are studied in human volunteers at two levels of oral dosing. Etersalate inhibits at the lower dosage platelet function and decreased TXA ₂ levels, but PGI ₂ generation from rat aortic rings is stimulated when incubated with plasma from Etersalate-treated donors. Blood coagulation parameters remain within normal values. Etersalate administration can act on platelet arachidonate metabolism at a different level than that of the cyclooxygenase pathway ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
