

## Olaparib

<b>Cat. No.:</b>	HY-10162		
<b>CAS No.:</b>	763113-22-0		
<b>Molecular Formula:</b>	C <sub>24</sub> H <sub>23</sub> FN <sub>4</sub> O <sub>3</sub>		
<b>Molecular Weight:</b>	434.46		
<b>Target:</b>	PARP; Autophagy; Mitophagy		
<b>Pathway:</b>	Cell Cycle/DNA Damage; Epigenetics; Autophagy		
<b>Storage:</b>	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	6 months
		-20°C	1 month

### SOLVENT & SOLUBILITY

#### In Vitro

DMSO : 100 mg/mL (230.17 mM; Need ultrasonic)  
 DMF : 50 mg/mL (115.09 mM; Need ultrasonic)  
 Ethanol : 3.12 mg/mL (7.18 mM; ultrasonic and warming and heat to 60°C)

Preparing Stock Solutions	Solvent Concentration	Mass		
		1 mg	5 mg	10 mg
	1 mM	2.3017 mL	11.5085 mL	23.0171 mL
	5 mM	0.4603 mL	2.3017 mL	4.6034 mL
	10 mM	0.2302 mL	1.1509 mL	2.3017 mL

Please refer to the solubility information to select the appropriate solvent.

#### In Vivo

- Add each solvent one by one: 5% DMSO >> 40% PEG300 >> 5% Tween-80 >> 50% saline  
Solubility: ≥ 5 mg/mL (11.51 mM); Clear solution
- Add each solvent one by one: 5% DMSO >> 95% (20% SBE-β-CD in saline)  
Solubility: ≥ 5 mg/mL (11.51 mM); Clear solution
- Add each solvent one by one: 10% DMF >> 40% PEG300 >> 5% Tween-80 >> 45% saline  
Solubility: ≥ 2.5 mg/mL (5.75 mM); Clear solution
- Add each solvent one by one: 10% DMF >> 90% (20% SBE-β-CD in saline)  
Solubility: ≥ 2.5 mg/mL (5.75 mM); Clear solution
- Add each solvent one by one: 10% DMF >> 90% corn oil  
Solubility: ≥ 2.5 mg/mL (5.75 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline)  
Solubility: ≥ 2.5 mg/mL (5.75 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline  
Solubility: ≥ 2.08 mg/mL (4.79 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% corn oil

Solubility:  $\geq 2.08$  mg/mL (4.79 mM); Clear solution  
9. Add each solvent one by one: 1% DMSO >> 99% saline  
Solubility:  $\geq 0.5$  mg/mL (1.15 mM); Clear solution

## BIOLOGICAL ACTIVITY

<b>Description</b>	Olaparib (AZD2281; KU0059436) is a potent and orally active PARP inhibitor with IC <sub>50</sub> s of 5 and 1 nM for PARP1 and PARP2, respectively. Olaparib is an autophagy and mitophagy activator <sup>[1][2][3][4]</sup> .			
<b>IC<sub>50</sub> &amp; Target</b>	PARP-2 1 nM (IC <sub>50</sub> )	PARP-1 5 nM (IC <sub>50</sub> )	tankyrase-1 1.5 $\mu$ M (IC <sub>50</sub> )	Autophagy
	Mitophagy			
<b>In Vitro</b>	Olaparib (AZD2281) is a single digit nanomolar inhibitor of both PARP-1 and PARP-2 that shows standalone activity against BRCA1-deficient breast cancer cell lines. Olaparib is applied to SW620 cell lysates, and identified the IC <sub>50</sub> for PARP-1 inhibition to be around 6 nM and the total ablation of PARP-1 activity to be at concentrations of 30–100 nM <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.			
<b>In Vivo</b>	Animals bearing SW620 xenografted tumors are treated with Olaparib (10 mg/kg, p.o.) in combination with NSC 362856 (TMZ) (50 mg/kg, p.o.) once daily for 5 consecutive days, after which the tumors are left to grow out <sup>[1]</sup> . Olaparib increases vascular perfusion in Calu-6 tumors established in a DWC model. Administration of olaparib(50 mg/kg, p.o.) as a single agent (top panel) or in combination with radiation (bottom panel) results in an increase in fluorescence intensity in the Calu-6 tumors <sup>[2]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.			

## PROTOCOL

<b>Kinase Assay</b> <sup>[1]</sup>	This assay determined the ability of Olaparib to inhibit PARP-1 enzyme activity. PARP-2 activity inhibition is measured by using a variation of the PARP-1 assay in which PARP-2 protein (recombinant) is bound down by a PARP-2 specific antibody in a 96-well white-walled plate. PARP-2 activity is measured following <sup>3</sup> H-NAD <sup>+</sup> DNA additions. After washing, scintillant is added to measure <sup>3</sup> H-incorporated ribosylations. For tankyrase-1, an AlphaScreen assay is developed in which HIS-tagged recombinant TANK-1 protein is incubated with biotinylated NAD <sup>+</sup> in a 384-well ProxiPlate assay. Alpha beads are added to bind the HIS and biotin tags to create a proximity signal, whereas the inhibition of TANK-1 activity is directly proportional to the loss of this signal. All experiments are repeated at least three times <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
<b>Cell Assay</b> <sup>[1]</sup>	The PF <sub>50</sub> value is the potentiation factor, which is calculated as the ratio of the IC <sub>50</sub> of the control growth with alkylating agent methylmethane sulfonate (MMS) divided by the IC <sub>50</sub> of the MMS combined with the PARP inhibitor. HeLa B cells are used, and Olaparib is tested at a fixed 200 nM concentration for screening with MMS. For the testing of Olaparib on the SW620 colorectal cell line, the concentrations that are used are 1, 3, 10, 100 and 300 nM. Cell growth is assessed by the use of the sulforhodamine B (SRB) assay <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
<b>Animal Administration</b> <sup>[2]</sup>	Mice <sup>[2]</sup> Mice bearing 220-250 mm <sup>3</sup> tumors are randomized into 4 treatment groups (n=5): A; vehicle control (10% DMSO in PBS/10% 2-hydroxy-propyl- $\beta$ -cyclodextrin daily for 5 days by oral gavage), B; Olaparib (50 mg/kg daily for 5 days by oral gavage), C; 10 Gy fractionated radiotherapy (2 Gy daily for 5 days), D; Olaparib and 10 Gy (5 $\times$ 2 Gy) fractionated radiotherapy (with olaparib given 30 min prior to each daily 2 Gy dose of radiation). Tumor volume measurements are determined daily until they

reached 1000 mm<sup>3</sup>. The number of days for each individual tumor to quadruple in size from the start of the treatment (relative tumor volume×4; RTV4) is calculated for the individual tumors in each group. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
