BIOLOGICAL ACTIVITY

Description

Dabigatran (BIBR 953), an oral anticoagulant, is a reversible, potent, competitive direct thrombin inhibitor (K_i=4.5 nM). Dabigatran (BIBR 953) also inhibits thrombin-induced platelet aggregation (IC_{50}=10 nM)[1][2].

IC_{50} & Target

Ki: 4.5 nM (thrombin)[1]

In Vitro

Dabigatran (BIBR 953) shows concentration-dependent anticoagulant effects in various species in vitro, doubling the activated partial thromboplastin time (aPTT), prothrombin time (PT) and ecarin clotting time (ECT) in human platelet-poor plasma at concentrations of 0.23, 0.83 and 0.18 μM, respectively[1].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

In Vivo

Dabigatran (0.01-0.1 mg/kg; i.v.) inhibits clot formation with an ED_{50} of 0.033 mg/kg in Wessler model[3].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Animal Model:	Male rats (Wessler model)[3]
Dosage:	0.01, 0.03, 0.05 and 0.1 mg/kg
Administration:	Intravenous injection
Result:	Inhibited clot formation with an ED_{50} of 0.033 mg/kg.
