

CGP36216 hydrochloride

Cat. No.:	HY-103518A
CAS No.:	1781834-71-6
Molecular Formula:	C ₅ H ₁₅ ClNO ₂ P
Molecular Weight:	187.6
Target:	GABA Receptor
Pathway:	Membrane Transporter/Ion Channel; Neuronal Signaling
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	CGP36216 hydrochloride is a selective antagonist at GABA presynaptic receptor. CGP36216 binds to GABAB receptor with a K _i value of 0.3 μM. CGP36216 hydrochloride can be used for research of anxiety and trauma-related disorders ^{[1][2]} .
In Vitro	CGP36216 is ineffective at GABA postsynaptic receptors, it is appreciably more active at presynaptic receptors ^[2] . CGP36216 (100 μM) could increase the frequency of spontaneous firing in VTA-DA neurons ^[3] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
