

## Eperezolid

<b>Cat. No.:</b>	HY-10393		
<b>CAS No.:</b>	165800-04-4		
<b>Molecular Formula:</b>	C <sub>18</sub> H <sub>23</sub> FN <sub>4</sub> O <sub>5</sub>		
<b>Molecular Weight:</b>	394.4		
<b>Target:</b>	Bacterial; Antibiotic		
<b>Pathway:</b>	Anti-infection		
<b>Storage:</b>	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	6 months
		-20°C	1 month

### SOLVENT & SOLUBILITY

#### In Vitro

DMSO : ≥ 44 mg/mL (111.56 mM)  
 \* "≥" means soluble, but saturation unknown.

Concentration	Mass		
	1 mg	5 mg	10 mg
<b>1 mM</b>	2.5355 mL	12.6775 mL	25.3550 mL
<b>5 mM</b>	0.5071 mL	2.5355 mL	5.0710 mL
<b>10 mM</b>	0.2535 mL	1.2677 mL	2.5355 mL

Please refer to the solubility information to select the appropriate solvent.

### BIOLOGICAL ACTIVITY

#### Description

Eperezolid(PNU-100592) is a oxazolidinone antibacterial agent, Eperezolid demonstrated good in vitro inhibitory activity, regardless of methicillin susceptibility for staphylococci(MIC90= 1-4 mg/ml).IC50 value: 1-4 mg/ml (MIC90, staphylococci) [1]Target: AntibioticEperezolid binds specifically to the 50S ribosomal subunit of Escherichia coli. The specific binding of eperezolid is dose dependent and is proportional to the ribosome concentrations. Scatchard analysis of the binding data reveals that the dissociation constant (Kd) is about 20 microM. The binding of eperezolid to the ribosome is competitively inhibited by chloramphenicol and lincomycin. However, unlike chloramphenicol and lincomycin, eperezolid does not inhibit the puromycin reaction, indicating that the oxazolidinones have no effect on peptidyl transferase [2]. eperezolid was found to bind only to the 50S subunit, with similar affinity as to the 70S ribosome, and to have no affinity for the 30S subunit [3].
