

TAK-715

Cat. No.:	HY-10456		
CAS No.:	303162-79-0		
Molecular Formula:	C ₂₄ H ₂₁ N ₃ OS		
Molecular Weight:	399.51		
Target:	p38 MAPK; Casein Kinase		
Pathway:	MAPK/ERK Pathway; Cell Cycle/DNA Damage; Stem Cell/Wnt		
Storage:	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	6 months
		-20°C	1 month

SOLVENT & SOLUBILITY

In Vitro

DMSO : ≥ 100 mg/mL (250.31 mM)
 H₂O : < 0.1 mg/mL (insoluble)
 * "≥" means soluble, but saturation unknown.

Preparing Stock Solutions	Solvent Concentration	Mass		
		1 mg	5 mg	10 mg
	1 mM	2.5031 mL	12.5153 mL	25.0307 mL
	5 mM	0.5006 mL	2.5031 mL	5.0061 mL
	10 mM	0.2503 mL	1.2515 mL	2.5031 mL

Please refer to the solubility information to select the appropriate solvent.

In Vivo

- Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline
 Solubility: ≥ 2.5 mg/mL (6.26 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% corn oil
 Solubility: ≥ 2.5 mg/mL (6.26 mM); Clear solution

BIOLOGICAL ACTIVITY

Description

TAK-715 is an orally active and potent p38 MAPK inhibitor with IC₅₀s of 7.1 nM, 200 nM for p38α and p38β, respectively. TAK-715 inhibits casein kinase I (CK1δ/ε) to regulate activation of Wnt/β-catenin signaling. TAK-715 shows good significant efficacy in a rat arthritis model^{[1][2]}.

IC₅₀ & Target

p38α 7.1 nM (IC ₅₀)	p38β 200 nM (IC ₅₀)	p38δ >10 μM (IC ₅₀)	p38γ >10 μM (IC ₅₀)
CK1δ	CK1ε		

In Vitro	<p>TAK-715 (compound 8h) inhibits LPS-stimulated release of TNF-α from THP-1 (IC₅₀=48 nM) and has no inhibitory activity for major CYPs, including CYP3A4. TAK-715 has no inhibition to p38γ/δ, JNK1, ERK1, IKKβ, MEKK1 or TAK1 (IC₅₀>10 μM of all)^[1]. TAK 715 (10 μM; 1 hour) inhibits Wnt-3a-induced hDvl2 phosphorylation and the hDvl2 shift in U2OS-EFC cells^[2]. TAK-715 (1 μM; pretreatment for 16 hours) dramatically suppresses Norepinephrine (NE)-stimulated induction of fibronectin, CTGF, and Snai1 expression in TGF-β1-treated HK-2 cells at both the mRNA and protein levels^[3]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>																
In Vivo	<p>TAK-715 (compound 8h; 3-30 mg/kg; PO) significantly reduces the secondary paw volume^[1]. TAK-715 (10 mg/kg; PO) has a C_{max} of 0.19 μg/mL and an AUC of 1.16 μg·h/mL. MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <table border="1" data-bbox="345 485 1515 720"> <tr> <td>Animal Model:</td> <td>7-week-old male Lewis rats with arthritis^[1]</td> </tr> <tr> <td>Dosage:</td> <td>3, 10, 30 mg/kg</td> </tr> <tr> <td>Administration:</td> <td>PO; single dose</td> </tr> <tr> <td>Result:</td> <td>Significantly reduced the secondary paw volume (25% inhibition)</td> </tr> </table> <table border="1" data-bbox="345 758 1515 993"> <tr> <td>Animal Model:</td> <td>Rat^[1]</td> </tr> <tr> <td>Dosage:</td> <td>10 mg/kg (Pharmacokinetic Analysis)</td> </tr> <tr> <td>Administration:</td> <td>PO</td> </tr> <tr> <td>Result:</td> <td>Had a C_{max} of 0.19 μg/mL and an AUC of 1.16 μg·h/mL.</td> </tr> </table>	Animal Model:	7-week-old male Lewis rats with arthritis ^[1]	Dosage:	3, 10, 30 mg/kg	Administration:	PO; single dose	Result:	Significantly reduced the secondary paw volume (25% inhibition)	Animal Model:	Rat ^[1]	Dosage:	10 mg/kg (Pharmacokinetic Analysis)	Administration:	PO	Result:	Had a C _{max} of 0.19 μ g/mL and an AUC of 1.16 μ g·h/mL.
Animal Model:	7-week-old male Lewis rats with arthritis ^[1]																
Dosage:	3, 10, 30 mg/kg																
Administration:	PO; single dose																
Result:	Significantly reduced the secondary paw volume (25% inhibition)																
Animal Model:	Rat ^[1]																
Dosage:	10 mg/kg (Pharmacokinetic Analysis)																
Administration:	PO																
Result:	Had a C _{max} of 0.19 μ g/mL and an AUC of 1.16 μ g·h/mL.
