

AMG 517

Cat. No.:	HY-10634		
CAS No.:	659730-32-2		
Molecular Formula:	C ₂₀ H ₁₃ F ₃ N ₄ O ₂ S		
Molecular Weight:	430.4		
Target:	TRP Channel		
Pathway:	Membrane Transporter/Ion Channel; Neuronal Signaling		
Storage:	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	6 months
		-20°C	1 month

SOLVENT & SOLUBILITY

In Vitro	DMSO : 41.67 mg/mL (96.82 mM; Need ultrasonic)				
		Solvent Concentration	Mass 1 mg	5 mg	10 mg
	Preparing Stock Solutions	1 mM	2.3234 mL	11.6171 mL	23.2342 mL
		5 mM	0.4647 mL	2.3234 mL	4.6468 mL
10 mM		0.2323 mL	1.1617 mL	2.3234 mL	
Please refer to the solubility information to select the appropriate solvent.					
In Vivo	1. Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline Solubility: ≥ 2.5 mg/mL (5.81 mM); Clear solution 2. Add each solvent one by one: 10% DMSO >> 90% corn oil Solubility: ≥ 2.5 mg/mL (5.81 mM); Clear solution				

BIOLOGICAL ACTIVITY

Description	AMG 517 is a potent and selective vanilloid receptor-1 (TRPV1) antagonist with an IC ₅₀ of 0.5 nM.
IC₅₀ & Target	IC ₅₀ : 0.5 nM (TRPV1) ^[1]
In Vitro	<p>AMG 517 retains potency in the capsaicin- and acid-mediated assays with IC₅₀ values of 0.9 and 0.5 nM^[1]. AMG 517 inhibits capsaicin, pH 5, and heat-induced⁴⁵Ca²⁺ uptake into cells expressing TRPV1 with IC₅₀ values of 1 to 2 nM. AMG 517 blocks capsaicin-, proton-, and heat-induced inward currents in TRPV1-expressing cells similarly. AMG 517 inhibits native TRPV1 activation by capsaicin in rat dorsal root ganglion neurons with an IC₅₀ value of 0.68 ± 0.2 nM. AMG 517 is a competitive antagonist of both rat and human TRPV1 with dissociation constant (K_b) values of 4.2 and 6.2 nM, respectively^[2].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>

In Vivo

AMG 517 is shown to be effective in a rodent “on-target” biochemical challenge model (capsaicin-induced flinch, $ED_{50}=0.33$ mg/kg p.o.) and is antihyperalgesic in a model of inflammatory pain (CFA-induced thermal hyperalgesia, $MED=0.83$ mg/kg, p.o.)^[1]. The minimally effective dose is 0.3 mg/kg for AMG 517 and the corresponding plasma concentration is 90 ng/mL. Oral administration of AMG 517 reverses established thermal hyperalgesia in a dose-dependent manner at 21 h after CFA injection. AMG 517 causes transient hyperthermia in rodents, dogs, and monkeys. AMG 517 induces hyperthermia in a steep dose-dependent manner, with 0.3, 1, and 3 mg/kg associated with 0.5, 0.6, and 1.6°C increases in body temperature, respectively. Body temperatures of rats treated with all doses of AMG 517 return to baseline within 10 to 20 h^[2]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.

PROTOCOL

Animal Administration ^[2]

Rats: After multiple days of full habituation to the testing equipment and paradigm, CFA-induced thermal hyperalgesia is evaluated by measuring paw withdrawal latencies in male Sprague-Dawley rats. Twenty-one hours after CFA injection (50 µL of 0.1%), animals are dosed (p.o.) with AMG 517 or AMG8163 at a dose range of 0.001 to 30 mg/kg in a volume of 5 mL/kg. Two hours after drug dosing (23 h after CFA injection), paw withdrawal latencies are measured using modified Hargreaves hot boxes by investigators fully blinded to treatment conditions^[2].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
