

## Propiolactone

Cat. No.:	HY-107931	
CAS No.:	57-57-8	
Molecular Formula:	C <sub>3</sub> H <sub>4</sub> O <sub>2</sub>	
Molecular Weight:	72.06	
Target:	SARS-CoV	
Pathway:	Anti-infection	
Storage:	Pure form	-20°C 3 years
	In solvent	-80°C 6 months
		-20°C 1 month

### SOLVENT & SOLUBILITY

In Vitro	DMSO : 100 mg/mL (1387.73 mM; Need ultrasonic)																													
	Preparing Stock Solutions	<table border="1"> <thead> <tr> <th>Solvent</th> <th>Mass</th> <th>1 mg</th> <th>5 mg</th> <th>10 mg</th> </tr> </thead> <tbody> <tr> <td>Concentration</td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>1 mM</td> <td></td> <td>13.8773 mL</td> <td>69.3866 mL</td> <td>138.7733 mL</td> </tr> <tr> <td>5 mM</td> <td></td> <td>2.7755 mL</td> <td>13.8773 mL</td> <td>27.7547 mL</td> </tr> <tr> <td>10 mM</td> <td></td> <td>1.3877 mL</td> <td>6.9387 mL</td> <td>13.8773 mL</td> </tr> </tbody> </table>	Solvent	Mass	1 mg	5 mg	10 mg	Concentration					1 mM		13.8773 mL	69.3866 mL	138.7733 mL	5 mM		2.7755 mL	13.8773 mL	27.7547 mL	10 mM		1.3877 mL	6.9387 mL	13.8773 mL			
		Solvent	Mass	1 mg	5 mg	10 mg																								
		Concentration																												
		1 mM		13.8773 mL	69.3866 mL	138.7733 mL																								
5 mM		2.7755 mL	13.8773 mL	27.7547 mL																										
10 mM		1.3877 mL	6.9387 mL	13.8773 mL																										
Please refer to the solubility information to select the appropriate solvent.																														
In Vivo	1. Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline Solubility: ≥ 2.5 mg/mL (34.69 mM); Clear solution																													
	2. Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline) Solubility: ≥ 2.5 mg/mL (34.69 mM); Clear solution																													
	3. Add each solvent one by one: 10% DMSO >> 90% corn oil Solubility: ≥ 2.5 mg/mL (34.69 mM); Clear solution																													

### BIOLOGICAL ACTIVITY

Description	Propiolactone (β-propiolactone; 2-Oxetanone) is a viral chemical inactivator that causes the infectious inactivation of viruses. Propiolactone was co-incubated with SARS-CoV at a ratio of 1:1000 (v:v) and used as a bacteriostatic agent to formulate the BPL-inactivated influenza virus vaccine (Flu-BPL) <sup>[1][2]</sup> .
IC <sub>50</sub> & Target	SARS-CoV-2 <sup>[1]</sup>
In Vitro	Propiolactone (β-propiolactone) can be used for vaccine purification. After cells were harvested by low-speed centrifugation, SARS-CoV was chemically inactivated with Propiolactone (1:1000 v:v). Propiolactone was incubated with

---

SARS-CoV for 24 h at 4°C. A second incubation at room temperature was performed to hydrolyze residual propiolactone. and concentration of the vaccine. Following BPL inactivation. a polyethylene glycol-sodium chloride (PEG-NaCl) mixture was added to precipitate the inactivated virus. After cen and concentration of the vaccine. After propiolactone inactivation, a polyethylene glycol-sodium chloride (PEG-NaCl) mixture is added to precipitate the inactivated virus. Finally, Propiolactone (1:10000 v:v) was added as a bacteriostatic agent.

Propiolactone-inactivated virus loses infectivity in Vero cells<sup>[1]</sup>.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

#### In Vivo

Mice were immunized with propiolactone ( $\beta$ -propiolactone)-inactivated influenza A virus (~25 mg total protein per dose; intramuscular injection). SARS is non-lethal in young BALB/c mice after propiolactone inactivation treatment. Although the virus replicated in the respiratory tract of the mice, it was cleared by day 5. Propiolactone treatment yielded 1.5  $\mu$ g of total hemagglutinin protein, which was negative after infection of mice<sup>[1]</sup>.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
