

AZD1390

Cat. No.:	HY-109566		
CAS No.:	2089288-03-7		
Molecular Formula:	C ₂₇ H ₃₂ FN ₅ O ₂		
Molecular Weight:	477.57		
Target:	ATM/ATR		
Pathway:	Cell Cycle/DNA Damage; PI3K/Akt/mTOR		
Storage:	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	6 months
		-20°C	1 month

SOLVENT & SOLUBILITY

In Vitro

DMSO : 25 mg/mL (52.35 mM; Need ultrasonic and warming)

Preparing Stock Solutions	Solvent Concentration	Mass		
		1 mg	5 mg	10 mg
	1 mM	2.0939 mL	10.4697 mL	20.9393 mL
	5 mM	0.4188 mL	2.0939 mL	4.1879 mL
	10 mM	0.2094 mL	1.0470 mL	2.0939 mL

Please refer to the solubility information to select the appropriate solvent.

BIOLOGICAL ACTIVITY

Description

AZD1390 is a potent, highly selective, orally bioavailable, brain-penetrant ATM inhibitor with an IC₅₀ of 0.78 nM in cell^[1].

IC₅₀ & Target

ATM

In Vivo

Median survival of mice treated with AZD1390 and radiation are significantly longer than untreated control mice (p=0.001). No overt signs of treatment toxicity are observed with small animal radiation research platform (SARRP) contrary to wholehead irradiated mice that seem to develop mucositis and difficulties drinking and eating at doses >10 Gy in combination with AZD1390^[2].

PROTOCOL

Animal Administration [2]

Mouse GL261 glioma (p53 mutant) cells are implanted intra-cranially into immunocompetent, syngeneic C57/bl6 mice followed by bioluminescent imaging (BLI) prior to randomization. AZD1390 is administered by oral gavage prior to deliver multiple fractions of 2-3 Gy of radiation on 2 to 4 consecutive days. Radiation is administered via small animal radiation research platform (SARRP) irradiation to the site of the tumor with a 5×5 mm lateral field^[2]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
