

CYM5442 hydrochloride

Cat. No.:	HY-10968A
CAS No.:	1783987-80-3
Molecular Formula:	C ₂₃ H ₂₈ ClN ₃ O ₄
Molecular Weight:	445.94
Target:	LPL Receptor
Pathway:	GPCR/G Protein
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	CYM5442 hydrochloride is a potent, highly-selective and orally active sphingosine 1-phosphate (S1P1) receptor agonist with an EC ₅₀ of 1.35 nM. CYM5442 hydrochloride is inactive against S1P2, S1P3, S1P4, and S1P5. CYM5442 hydrochloride activates S1P1-dependent p42/p44-MAPK phosphorylation. CYM5442 exerts retinal neuroprotection. CYM5442 hydrochloride can easily penetrate the central nervous system (CNS) ^{[1][2]} .								
IC₅₀ & Target	EC ₅₀ : 1.35 nM (Sphingosine 1-phosphate (S1P1) receptor) ^[1]								
In Vitro	<p>CYM5442 (0.5 μM; 0-60 minutes; HEK293 cells) treatment stimulates S1P1 phosphorylation in a time-dependent manner in P32-orthophosphate labeled cells^[1].</p> <p>CYM5442 activates S1P1-dependent p42/p44-MAPK phosphorylation in CHO-K1 cells transfected with S1P1 with an EC₅₀ of 46 nM. The R120 for alanine (R120A) mutant is still able to maintain p42/p44-MAPK activity when incubated with CYM5442 (EC₅₀ of 67 nM). Activation of p42/p44-MAPK by CYM-5442 in E121A S1P1 cells is concentration dependent, with a mean EC₅₀ value of 134 nM^[1].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <p>Western Blot Analysis^[1]</p> <table border="1"> <tr> <td>Cell Line:</td> <td>HEK293 cells stably expressing S1P1 fused to GFP on the carboxy-terminus</td> </tr> <tr> <td>Concentration:</td> <td>0.5 μM</td> </tr> <tr> <td>Incubation Time:</td> <td>0 minutes, 2 minutes, 5 minutes, 10 minutes, 30 minutes, 60 minutes</td> </tr> <tr> <td>Result:</td> <td>Stimulated S1P1 phosphorylation in a time-dependent manner.</td> </tr> </table>	Cell Line:	HEK293 cells stably expressing S1P1 fused to GFP on the carboxy-terminus	Concentration:	0.5 μM	Incubation Time:	0 minutes, 2 minutes, 5 minutes, 10 minutes, 30 minutes, 60 minutes	Result:	Stimulated S1P1 phosphorylation in a time-dependent manner.
Cell Line:	HEK293 cells stably expressing S1P1 fused to GFP on the carboxy-terminus								
Concentration:	0.5 μM								
Incubation Time:	0 minutes, 2 minutes, 5 minutes, 10 minutes, 30 minutes, 60 minutes								
Result:	Stimulated S1P1 phosphorylation in a time-dependent manner.								
In Vivo	<p>CYM5442 (1 mg/kg; intraperitoneal injection; daily; for 5 days; adult male albino Wistar rats) treatment shows preserved visual function of visual evoked potentials (VEP). Retinal nerve fiber layer (RNFL) is significantly thicker in the CYM treated-animals compared to the vehicle^[2].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <table border="1"> <tr> <td>Animal Model:</td> <td>Adult male albino Wistar rats (8-10 weeks old; 180-230 g) infected ocular endothelin-1 (ET-1)^[2]</td> </tr> </table>	Animal Model:	Adult male albino Wistar rats (8-10 weeks old; 180-230 g) infected ocular endothelin-1 (ET-1) ^[2]						
Animal Model:	Adult male albino Wistar rats (8-10 weeks old; 180-230 g) infected ocular endothelin-1 (ET-1) ^[2]								

Dosage:	1 mg/kg
Administration:	Intraperitoneal injection; daily; for 5 days
Result:	Visual evoked potentials (VEP) showed preserved visual function. Showed significantly higher retinal ganglion cells (RGCs) numbers.
