

NBI-31772 hydrate

Cat. No.:	HY-110135A		
Molecular Formula:	C ₁₇ H ₁₁ NO _{7.7/4} H ₂ O		
Molecular Weight:	372.82		
Target:	IGF-1R		
Pathway:	Protein Tyrosine Kinase/RTK		
Storage:	Powder	-20°C	3 years
	In solvent	-80°C	6 months
		-20°C	1 month

BIOLOGICAL ACTIVITY

Description	NBI-31772 hydrate is a potent inhibitor of interaction between insulin-like growth factor (IGF) and IGF-binding proteins (IGFBPs). NBI-31772 hydrate is also a nonpeptide ligand that releases bioactive IGF-I from the IGF-I/IGFBP-3 complex (K _s =1-24 nM for all six human subtypes). Anxiolytic and antidepressant-like effects ^{[1][2][3]} .		
In Vivo	NBI-31772 (5-100 µg; icv; immediately or at 1, 2, or, 3 hours after MCAO) at the time of ischemia onset also dose-dependently reduced infarct size, and the highest dose (100 µg) significantly reduced both total and cortical infarct volume ^[3] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.		
	Animal Model:	Sprague-Dawley rats (subtemporal middle cerebral artery occlusion model, MCAO) ^[3]	
	Dosage:	5-100 µg	
	Administration:	Icv; immediately or at 1, 2, or, 3 hours after MCAO	
	Result:	Resulted in a significant reduction of the total and cortical lesion volume.
