### **BIOLOGICAL ACTIVITY**

**Description**L-Methionine-<sup>34</sup>S is a 34S-labeled L-Methionine. L-Methionine is the L-isomer of Methionine, an essential amino acid for human development. Methionine acts as a hepatoprotectant.

In Vitro Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as

tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to

affect the pharmacokinetic and metabolic profiles of  $drugs^{[1]}$ .

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
