Product Data Sheet

8-iso Prostaglandin $F2\alpha$ -d₉

Molecular Weight: 363.54

Target: Endogenous Metabolite

Pathway: Metabolic Enzyme/Protease

Storage: Please store the product under the recommended conditions in the Certificate of

Analysis.

BIOLOGICAL ACTIVITY

Description	8-iso Prostaglandin $F2\alpha$ - d_9 is the deuterium labeled 8-Isoprostaglandin $F2\alpha$. 8-Isoprostaglandin $F2\alpha$ is an isoprostane produced by the non-enzymatic peroxidation of arachidonic acid in membrane phospholipids. 8-Isoprostaglandin $F2\alpha$ is present in human plasma in two distinct forms - esterified in phospholipids and as the free acid. 8-Isoprostaglandin $F2\alpha$ is a weak TP receptor agonist in vascular smooth muscle.
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
