

## α-Carotene

Cat. No.:	HY-113462
CAS No.:	7488-99-5
Molecular Formula:	C <sub>40</sub> H <sub>56</sub>
Molecular Weight:	536.87
Target:	Others
Pathway:	Others
Storage:	-80°C

### BIOLOGICAL ACTIVITY

<b>Description</b>	α-Carotene, a precursor of vitamin A, is used as an anti-metastatic agent or as an adjuvant for anti-cancer drugs. α-Carotene is isolated from yellow-orange and dark-green vegetables <sup>[1][2]</sup> .								
<b>In Vitro</b>	<p>α-Carotene (0.5-2.5 μM; 24 hours) significantly increases protein expression of TIMP-1 and TIMP-2 in a concentration-dependent manner in LLC cells. AC (0.5-2.5 μM) significantly increases PAI-1 protein expression. α-Carotene (2.5 μM) also significantly inhibits integrin β1-mediated phosphorylation of focal adhesion kinase (FAK) which then decreased the phosphorylation of MAPK family<sup>[2]</sup>.</p> <p>α-Carotene (0.5, 1, 2.5 μM; 48 hours) significantly and concentration-dependently inhibits invasion of LLC during 48 h of incubation<sup>[2]</sup>.</p> <p>α-Carotene (0.5, 1, 2.5 μM; 24 hours) significantly decreases activities of MMP-9, -2 and uPA in concentration-dependent manner in LLC cells<sup>[2]</sup>.</p> <p>α-Carotene (2, 5, 10 μM; 7 days) inhibits the proliferation of the human neuroblastoma cell line GOTO in a dose- and time-dependent manner. α-Carotene (5 μM; 48 hours) halts the cell cycle at the G0/G1 phase concomitantly with a reduction in the mRNA expression of the protooncogene N-Myc<sup>[3]</sup>.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <p>Western Blot Analysis<sup>[2]</sup></p> <table border="1"> <tr> <td>Cell Line:</td> <td>Lewis lung carcinoma (LLC) cells</td> </tr> <tr> <td>Concentration:</td> <td>0.5, 1, 2.5 μM</td> </tr> <tr> <td>Incubation Time:</td> <td>24 hours</td> </tr> <tr> <td>Result:</td> <td>Significantly increased protein expression of TIMP-1 and TIMP-2 in a concentration-dependent manner in LLC cells.</td> </tr> </table>	Cell Line:	Lewis lung carcinoma (LLC) cells	Concentration:	0.5, 1, 2.5 μM	Incubation Time:	24 hours	Result:	Significantly increased protein expression of TIMP-1 and TIMP-2 in a concentration-dependent manner in LLC cells.
Cell Line:	Lewis lung carcinoma (LLC) cells								
Concentration:	0.5, 1, 2.5 μM								
Incubation Time:	24 hours								
Result:	Significantly increased protein expression of TIMP-1 and TIMP-2 in a concentration-dependent manner in LLC cells.								
<b>In Vivo</b>	<p>α-Carotene (5 mg/kg; oral; twice a week; for additional 3 weeks) alone significantly decreases lung metastasis without affecting primary tumor growth<sup>[2]</sup>.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <table border="1"> <tr> <td>Animal Model:</td> <td>C57BL/6 male mice (4 weeks old; 20-25 g) with LLC cells<sup>[2]</sup></td> </tr> <tr> <td>Dosage:</td> <td>5 mg/kg</td> </tr> </table>	Animal Model:	C57BL/6 male mice (4 weeks old; 20-25 g) with LLC cells <sup>[2]</sup>	Dosage:	5 mg/kg				
Animal Model:	C57BL/6 male mice (4 weeks old; 20-25 g) with LLC cells <sup>[2]</sup>								
Dosage:	5 mg/kg								

---

Administration:	Oral; twice a week; for additional 3 weeks
Result:	Significantly decreased lung metastasis.
