## BIOLOGICAL ACTIVITY

Description

In Vitro

BMS-195270 is a small molecule that inhibits Carbachol (HY-B1208)-evoked tonicity of isolated rat bladder strips. BMS195270 inhibits calcium flux ${ }^{[1]}$.

BMS-195270 $(3 \mu \mathrm{M})$ produces a dramatic reduction in developed pressure at infusion volumes of 0.2-1.3 mL and inhibits spontaneous contractions in an ex vivo rat whole bladder model ${ }^{[1]}$.
BMS-195270 ( 2.8 mM ) results adult worms of C. elegans displaying an Egl-d phenotype, as well as slowed or arrested pharyngeal pumping (Eat), and uncoordinated motion (Unc) ${ }^{[1]}$.
BMS-195270 inhibits the response of HEK293 cells to the muscarinic agonist Carbachol (HY-B1208) with an EC 50 of $2 \mu \mathrm{M}^{[1]}$ BMS-195270 inhibits calcium flux, and retains inhibitory activity even when endogenous calcium channels are inactivated ${ }^{[1]}$ MCE has not independently confirmed the accuracy of these methods. They are for reference only.
