

Mensacarcin

Cat. No.:	HY-122534
CAS No.:	808750-39-2
Molecular Formula:	C ₂₁ H ₂₄ O ₉
Molecular Weight:	420.41
Target:	Mitochondrial Metabolism; ADC Cytotoxin; Apoptosis
Pathway:	Metabolic Enzyme/Protease; Antibody-drug Conjugate/ADC Related; Apoptosis
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Mensacarcin, a highly complex polyketide, strongly inhibits cell growth universally in cancer cell lines and potently induces apoptosis in melanoma cells. Mensacarcin targets to mitochondria, affects energy metabolism in mitochondria, and activates caspase-dependent apoptotic pathways. Mensacarcin, an antibiotic, can be used as a cytotoxic component of antibody-drug conjugates (ADCs) ^{[1][2]} .																
IC₅₀ & Target	Traditional Cytotoxic Agents																
In Vitro	<p>Mensacarcin (0-100 μM; 24 hours) exhibits general cytostatic but type-specific cytotoxic effects for melanoma cells^[1]. Mensacarcin (2-50 μM; 15 hours) induces rapid apoptotic cell death in melanoma cells^[1]. Mensacarcin exhibits potent cytostatic properties (mean of 50% growth inhibition=0.2 μM) in almost all cell lines of the National Cancer Institute (NCI)-60 cell line screen and relatively selective cytotoxicity against melanoma cells. Mensacarcin is a highly oxygenated polyketide that was first isolated from soil-dwelling Streptomyces bacteria. Mensacarcin impairs mitochondrial function in melanoma cells^[1].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <p>Cell Viability Assay^[1]</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 30%;">Cell Line:</td> <td>SK-Mel-28 and SK-Mel-5 melanoma cells, HCT-116 colon cancer cells</td> </tr> <tr> <td>Concentration:</td> <td>0.01, 0.1, 1, 10, 100 μM</td> </tr> <tr> <td>Incubation Time:</td> <td>24 hours</td> </tr> <tr> <td>Result:</td> <td>Induced concentration- and time-dependent cell death in the two tested melanoma cell lines.
