ISRIB

Cat. No.:	HY-12495A				
CAS No.:	548470-11-7				
Molecular Formula:	C ₂₂ H ₂₄ Cl ₂ N ₂ O ₄				
Molecular Weight:	451.34				
Target:	Biochemical Assay Reagents; Eukaryotic Initiation Factor (eIF)				
Pathway:	Others; Cell Cycle/DNA Damage				
Storage:	Powder	-20°C	3 years		
		4°C	2 years		
	In solvent	-80°C	6 months		
		-20°C	1 month		

SOLVENT & SOLUBILITY

Preparing Stock Solutions	Solvent Mass Concentration	1 mg	5 mg	10 mg			
	1 mM	2.2156 mL	11.0781 mL	22.1562 mL			
	Stock Solutions	5 mM	0.4431 mL	2.2156 mL	4.4312 mL		
	10 mM	0.2216 mL	1.1078 mL	2.2156 mL			
	Please refer to the solubility information to select the appropriate solvent.						

BIOLOGICAL ACTIVITY				
Description	ISRIB is a brain-penetrant inhibitor of integrated stress response (ISR). Persistent activation of the ISR has been linked to the development of several neurological disorders as ISR represses translation through inhibiting eIF2B. ISRIB inhibits the ISR by promoting the nucleotide exchange activity of eIF2B and recovering the translation, and thus can be used for neurological disorders research ^{[1][2][3]} .			
In Vitro	ISRIB (200 nM, 2 h) blocks stress granule formation induced by eIF2α phosphorylation in U2OS cells ^[3] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.			
In Vivo	ISRIB (0.25 mg/kg, i.p., daily) restores translation in prion-diseased mice at downstream of eIF2α phosphorylation, confering neuroprotection in prion-diseased mice ^[2] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
