NP-G2-044

**Cat. No.:** HY-125506

**CAS No.:** 180745-59-6

**Molecular Formula:** C₂₁H₁₆F₃N₃O₂

**Molecular Weight:** 399.37

**Target:** Others

**Pathway:** Others

**Storage:**
- Powder: -20°C, 3 years; 4°C, 2 years; In solvent: -80°C, 6 months; -20°C, 1 month

**SOLVENT & SOLUBILITY**

**In Vitro**

DMSO: 100 mg/mL (250.39 mM; Need ultrasonic)

Please refer to the solubility information to select the appropriate solvent.

**In Vivo**

1. Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline
   - Solubility: ≥ 2.5 mg/mL (6.26 mM); Clear solution
2. Add each solvent one by one: 10% DMSO >> 90% corn oil
   - Solubility: ≥ 2.5 mg/mL (6.26 mM); Clear solution

**BIOLOGICAL ACTIVITY**

**Description**

NP-G2-044 is a potent, orally active fascin inhibitor, with an IC₅₀ of ~2 μM. NP-G2-044 blocks tumor metastasis and increases antitumor immune response[1][2].

**In Vitro**

NP-G2-044 inhibits the migration of MDA-MB-231 tumor cells with an IC₅₀ ~10 μM. NP-G2-044 decreases filopodial formation resulting in decreased lamellipodial formation[1].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

**In Vivo**

NP-G2-044 (100 mg/kg; i.p.; daily for 18 days) inhibits breast tumor metastasis in mouse models[1].

Upon oral administration, NP-G2-044 targets and binds to fascin, thereby preventing the interaction of fascin with actin filaments, thereby preventing actin bundling and filopodia formation. By preventing actin cytoskeletal reorganization, the
dynamic changes in cell shape that are necessary for tumor cell migration and invasion to occur are impaired, and tumor cell migration and metastasis are inhibited[^3].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
