

Petunidin chloride

Cat. No.:	HY-126410
CAS No.:	1429-30-7
Molecular Formula:	C ₁₆ H ₁₃ ClO ₇
Molecular Weight:	352.72
Target:	FAK
Pathway:	Protein Tyrosine Kinase/RTK
Storage:	-20°C, sealed storage, away from moisture * In solvent : -80°C, 6 months; -20°C, 1 month (sealed storage, away from moisture)

BIOLOGICAL ACTIVITY

Description

Petunidin chloride is an O-methylated anthocyanidin derived from delphinidin. Petunidin chloride binds with and suppresses the activity of focal adhesion kinase and to inhibit platelet-derived growth factor-induced aortic smooth muscle cell migration, which may confer a protective effect against atherosclerosis.

Caution: Product has not been fully validated for medical applications. For research use only.
