BIOLOGICAL ACTIVITY

Description	9 α ,11 β -Prostaglandin F2 α is an endogenous metabolite present in Urine that can be used for the research of Asthma ^{[1][2]} .
IC ₅₀ & Target	Human Endogenous Metabolite
In Vitro	Endogenous metabolites is defined as those that are annotated by Kyoto Encyclopedia of Genes and Genomes as substrates or products of the ~1900 metabolic enzymes encoded in our genome. It is clear in the body of literature that there are documented toxic properties for many of these metabolites ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
