

AM-1638

Cat. No.:	HY-13467
CAS No.:	1142214-62-7
Molecular Formula:	C ₃₃ H ₃₅ FO ₄
Molecular Weight:	514.63
Target:	GPR40
Pathway:	GPCR/G Protein
Storage:	Please store the product under the recommended conditions in the COA.

BIOLOGICAL ACTIVITY

Description	AM-1638 is a potent and orally bioavailable GPR40/FFA1 full agonist with an EC ₅₀ of 0.16 μM.
IC ₅₀ & Target	IC ₅₀ : 0.16 μM (GPR40/FFA1) ^[1]
In Vivo	AM-1638 exhibits moderate cross-species plasma clearance and volume of distribution, resulting in plasma half-lives suitable for evaluation of its antidiabetic properties in mouse, rat, and cynomolgus monkey. Moreover, oral administration of full agonist AM-1638 demonstrates excellent oral bioavailability (mouse, >100%; rat, 72%; and cyno, 71%). AM-1638 exhibits antidiabetic activity in BDF/DIO mice ^[1] .

PROTOCOL

Animal Administration ^[1]	<p>Mice^[1]</p> <p>On the morning of the experiment, Male B6D2F1/J mice are fasted for four hours and body weight and blood glucose levels are measured. Animals are randomized into treatment groups based on these two parameters. Treatments are administered by oral gavage and sixty minutes later, the mice received a 2 g/kg glucose challenge dose by oral gavage (defined as t=0 min). Blood samples are collected at -60, 0, 15, 30, 60, 90 and 120 minutes via tail vein relative to the glucose challenge. Glucose levels are monitored with a glucometer. Plasma insulin is measured using a mouse insulin ELISA^[1].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>
