BIOLOGICAL ACTIVITY

Description

DM-β-CD (2,6-Di-O-methyl-β-cyclodextrin) is a cyclic molecule consisting of seven glucose units modified with two methyl groups at the 2- and 6-positions. It is usually used as a solubilizer and carrier for poorly soluble drugs in pharmaceutical preparations. Furthermore, it has applications in analytical chemistry, food science, and environmental remediation due to its ability to form clathrates with various guest molecules, such as aromatic compounds, pesticides, and heavy metals.

In Vitro

2,6-Di-O-methyl-β-cyclodextrin is a biochemical reagent that can be used as a biological material or organic compound for life science related research.
