

Larsucoesterol sodium

Cat. No.:	HY-139576A
CAS No.:	1174047-40-5
Molecular Formula:	C ₂₇ H ₄₅ NaO ₃ S
Molecular Weight:	504.7
Target:	Endogenous Metabolite
Pathway:	Metabolic Enzyme/Protease
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Larsucoesterol (DUR-928) sodium, a cholesterol metabolite, is a potent liver X receptor (LXR) antagonist. Larsucoesterol sodium as a potent endogenous regulator decreases lipogenesis. Larsucoesterol sodium inhibits the cholesterol biosynthesis via decreasing mRNA levels and inhibiting the activation of SREBP-1 ^{[1][2][3]} .																		
In Vitro	<p>Larsucoesterol (DUR-928; 0-25 μM; 8 h; HepG2 cells) sodium inhibits cholesterol biosynthesis by decreasing HMG-CoA reductase mRNA levels and decreases free [¹⁴C] cholesterol in a dose-dependent manner^[1].</p> <p>Larsucoesterol (0-25 μM; 6 h; HepG2 cells) sodium inhibits HMG-CoA reductase expression by inhibition of both SREBP1 activation and expression in hepatocytes^[1].</p> <p>Larsucoesterol (0-50 μM; 48 h) sodium increases cell proliferation and decreases apoptosis in macrophages^[2].</p> <p>Larsucoesterol (0-25 μM; 48 h; macrophages) sodium inhibits activation of liver oxysterol receptor LXRα^[2].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <p>Cell Proliferation Assay^[2]</p> <table border="1"> <tr> <td>Cell Line:</td> <td>Macrophages</td> </tr> <tr> <td>Concentration:</td> <td>0, 5, 10, 15, 20, and 25 μM</td> </tr> <tr> <td>Incubation Time:</td> <td>48 hours</td> </tr> <tr> <td>Result:</td> <td>Induces cell proliferation and relative cell number after treatment for 48 h were 120% at 25 μM.</td> </tr> </table> <p>Apoptosis Analysis^[2]</p> <table border="1"> <tr> <td>Cell Line:</td> <td>Macrophages</td> </tr> <tr> <td>Concentration:</td> <td>0, 10, 20, 30, 40 and 50 μM</td> </tr> <tr> <td>Incubation Time:</td> <td>48 hours</td> </tr> <tr> <td>Result:</td> <td>Did not significantly affect the numbers of apoptotic or live cells.</td> </tr> </table> <p>Western Blot Analysis^[1]</p> <table border="1"> <tr> <td>Cell Line:</td> <td>HepG2 cells</td> </tr> </table>	Cell Line:	Macrophages	Concentration:	0, 5, 10, 15, 20, and 25 μM	Incubation Time:	48 hours	Result:	Induces cell proliferation and relative cell number after treatment for 48 h were 120% at 25 μM.	Cell Line:	Macrophages	Concentration:	0, 10, 20, 30, 40 and 50 μM	Incubation Time:	48 hours	Result:	Did not significantly affect the numbers of apoptotic or live cells.	Cell Line:	HepG2 cells
Cell Line:	Macrophages																		
Concentration:	0, 5, 10, 15, 20, and 25 μM																		
Incubation Time:	48 hours																		
Result:	Induces cell proliferation and relative cell number after treatment for 48 h were 120% at 25 μM.																		
Cell Line:	Macrophages																		
Concentration:	0, 10, 20, 30, 40 and 50 μM																		
Incubation Time:	48 hours																		
Result:	Did not significantly affect the numbers of apoptotic or live cells.																		
Cell Line:	HepG2 cells																		

Concentration:	0, 3, 6, 12, and 25 μ M
Incubation Time:	6 hours
Result:	Inhibited the activation of SREBP-1 and SREBP-2, and subsequently inhibit the expression HMG-CoA reductase.
Western Blot Analysis ^[2]	
Cell Line:	Macrophages
Concentration:	0, 3, 6, 12, and 25 μ M
Incubation Time:	48 hours
Result:	Decreased LXRA levels in the nuclei in a dose-dependent manner.

In Vivo	<p>Larsucosterol (DUR-928; 25 mg/kg; i.p.; twice in 14 hours; C57BL/6J mice with nonalcoholic fatty liver diseases (NAFLD) model) sodium reduces serum lipid levels in mice fed a high-fat diet^[3].</p> <p>Larsucosterol (25 mg/kg; i.p.; twice in 14 hours; C57BL/6J mice with nonalcoholic fatty liver diseases (NAFLD) model) sodium suppressed the expression of the genes and inhibits ABCA1 expression. Larsucosterol increases nuclear SREBP-1 Protein levels and cytoplasmic FAS and ACC1 protein levels in liver tissue^[3].</p> <p>Larsucosterol (25 mg/kg; i.p.; once every 3 days for 6 weeks; C57BL/6J mice with nonalcoholic fatty liver diseases (NAFLD) model) sodium protects the liver from injury by suppressing hepatic inflammation^[3].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>	
	Animal Model:	Female C57BL/6J mice with nonalcoholic fatty liver diseases (NAFLD) model ^[3]
	Dosage:	25 mg/kg
	Administration:	Intraperitoneal injection; twice in 14 hours
	Result:	<p>Decreased plasma TG, CHOL, and HDL-C by 40, 15, and 20%, respectively.</p> <p>Reduced the mRNA levels of SREBP-1c, ACC1, and FAS by 46, 57, and 49%, respectively.</p> <p>Suppressed ABCA1 expression.</p> <p>Suppressed nuclear SREBP-1, cytoplasmic ACC1, and FAS protein levels by 74, 58, and 47%, respectively.</p>
	Animal Model:	Female C57BL/6J mice with nonalcoholic fatty liver diseases (NAFLD) model ^[3]
	Dosage:	25 mg/kg
	Administration:	Intraperitoneal injection; once every 3 days for 6 weeks
	Result:	<p>Decreased plasma cholesterol levels.</p> <p>Reduced serum alkaline phosphatase, ALT, and AST levels.</p>
