BIOLOGICAL ACTIVITY

Description	PC Methyltetrazine-PEG4-NHS carbonate ester is a PEG-based PROTAC linker that can be used in the synthesis of PROTACs ^[1] . PC Methyltetrazine-PEG4-NHS carbonate ester is a click chemistry reagent, it contains a Tetrazine group that can undergo an inverse electron demand Diels-Alder reaction (IEDDA) with molecules containing TCO groups.
IC₅₀ & Target	PEGs
In Vitro	PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
