BIOLOGICAL ACTIVITY				
DIOLOGICAL ACTIVITY				
Description	t-Boc-Aminooxy-PEG8-MS is a PEG-based PROTAC linker that can be used in the synthesis of PROTACs <sup>[1]</sup> .			
IC <sub>50</sub> & Target	PEGs	Alkyl/ether		
In Vitro	PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
