Azido-PEG9-NHS ester

MedChemExpress

Cat. No.:	HY-140758		
Molecular Formula:	$C_{25}H_{44}N_{4}O_{13}$		
Molecular Weight:	608.64		
Target:	PROTAC Linkers	NNNN~0~0~0~0~0~0~0~0~0~0~0	
Pathway:	PROTAC		
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.		

BIOLOGICAL ACTIVITY			
Description	Azido-PEG9-NHS ester is a PEG-based PROTAC linker that can be used in the synthesis of PROTACs ^[1] . Azido-PEG9-NHS ester is a click chemistry reagent, it contains an Azide group and can undergo copper-catalyzed azide-alkyne cycloaddition reaction (CuAAc) with molecules containing Alkyne groups. Strain-promoted alkyne-azide cycloaddition (SPAAC) can also occur with molecules containing DBCO or BCN groups.		
IC ₅₀ & Target	PEGs Alk	yl/ether	
In Vitro	PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
