C18-PEG13-acid

| Cat. No.: | HY-144082 | |
|--------------------|-------------------------------------------------------------------------------------------|---------------------------------------|
| Molecular Formula: | C ₄₅ H ₉₀ O ₁₅ | |
| Molecular Weight: | 871.19 | |
| Target: | PROTAC Linkers | |
| Pathway: | PROTAC | °°°°°°°°°°°°°°°°°°°°°°°°°°°°°°°°°°°°° |
| Storage: | Please store the product under the recommended conditions in the Certificate of Analysis. | |

| BIOLOGICAL ACTIVITY | | |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Description | C18-PEG13-acid is a PEG-based PROTAC linker that can be used in the synthesis of PROTACs ^[1] . | |
| IC ₅₀ & Target | PEGs | |
| In Vitro | PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only. | |
