

Difluorocyclooctyne-CH₂-COOH

Cat. No.:	HY-145790
CAS No.:	1047997-31-8
Molecular Formula:	C ₁₀ H ₁₂ F ₂ O ₂
Molecular Weight:	202.2
Target:	Biochemical Assay Reagents
Pathway:	Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description

Difluorocyclooctyne-CH₂-COOH is a Difluorinated cyclooctyne (DIFO) analogue that can be used for imaging glycans on live cells. Difluorinated cyclooctyne (DIFO) reagents rapidly reacts with azides in living cells without the need for copper catalysis^[1]. Difluorocyclooctyne-CH₂-COOH is a click chemistry reagent, it contains an Alkyne group and can undergo copper-catalyzed azide-alkyne cycloaddition (CuAAC) with molecules containing Azide groups.
