

Tofacitinib Prodrug-1

Cat. No.:	HY-145829
Molecular Formula:	C ₃₆ H ₃₉ ClN ₁₀ O ₇
Molecular Weight:	759.21
Target:	JAK; Apoptosis
Pathway:	Epigenetics; JAK/STAT Signaling; Stem Cell/Wnt; Apoptosis
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Tofacitinib Prodrug-1 is an effective and oral active prodrug to mitigate the systemic adverse effects of Tofacitinib. Tofacitinib Prodrug-1 can effectively attenuate the oxazolone-induced colitis in mice model with low toxicity. Tofacitinib Prodrug-1 is a potential drug candidate for the treatment of ulcerative colitis ^[1] .												
In Vitro	Tofacitinib Prodrug-1 (compound 20g) (1 mM; 12 hours at 37 °C) is not obviously degraded from 0 to 12 hours in simulated gastric and intestinal fluid ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.												
In Vivo	<p>Tofacitinib Prodrug-1 (22.5 mg/kg; p.o.) can decrease the systemic exposure of tofacitinib by releasing the parent drug Tofacitinib into the circulation slowly^[1].</p> <p>Tofacitinib Prodrug-1 (22.5 mg/kg; p.o.) can increase intestinal exposure to improve the therapeutic effect of Tofacitinib^[1].</p> <p>Tofacitinib Prodrug-1 (1.5 mg/kg; p.o.; twice daily, for 4 days) can effectively attenuate the oxazolone-induced colitis in mice^[1].</p> <p>Tofacitinib Prodrug-1 (1.5 mg/kg; i.g.; twice daily, for 4 days) has no apparent influence on systemic immunosuppression in normal mice, which could decrease the risk of infection associated with Tofacitinib^[1].</p> <p>Tofacitinib Prodrug-1 (2000 mg/kg; i.g.; single) has low toxicity and was tolerated at an oral dose of 2000 mg/kg, and no significant change was observed in biochemical parameters and organ indexes^[1].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <table border="1"> <tr> <td>Animal Model:</td> <td>Male SD rats (5-6 weeks, 220-250 g, n=6) (pharmacokinetic)^[1]</td> </tr> <tr> <td>Dosage:</td> <td>22.5 mg/kg</td> </tr> <tr> <td>Administration:</td> <td>p.o.; blood were taken at 1, 2, 4, 6, 8, 12, 14, and 20 hours</td> </tr> <tr> <td>Result:</td> <td>Decreased the systemic exposure of tofacitinib by releasing the parent drug tofacitinib into the circulation slowly.</td> </tr> </table> <table border="1"> <tr> <td>Animal Model:</td> <td>Male BALB/c mice (5-6 weeks, 25-30 g, n = 6)^[1]</td> </tr> <tr> <td>Dosage:</td> <td>22.5 mg/kg</td> </tr> </table>	Animal Model:	Male SD rats (5-6 weeks, 220-250 g, n=6) (pharmacokinetic) ^[1]	Dosage:	22.5 mg/kg	Administration:	p.o.; blood were taken at 1, 2, 4, 6, 8, 12, 14, and 20 hours	Result:	Decreased the systemic exposure of tofacitinib by releasing the parent drug tofacitinib into the circulation slowly.	Animal Model:	Male BALB/c mice (5-6 weeks, 25-30 g, n = 6) ^[1]	Dosage:	22.5 mg/kg
Animal Model:	Male SD rats (5-6 weeks, 220-250 g, n=6) (pharmacokinetic) ^[1]												
Dosage:	22.5 mg/kg												
Administration:	p.o.; blood were taken at 1, 2, 4, 6, 8, 12, 14, and 20 hours												
Result:	Decreased the systemic exposure of tofacitinib by releasing the parent drug tofacitinib into the circulation slowly.												
Animal Model:	Male BALB/c mice (5-6 weeks, 25-30 g, n = 6) ^[1]												
Dosage:	22.5 mg/kg												

Administration:	p.o.; blood and intestinal tissues were taken at 0.5, 1, 2, 3, 4, 6, 9, and 12 hours
Result:	Increased intestinal exposure to improve the therapeutic effect of tofacitinib.
Animal Model:	Male BALB/c mice (5-6 weeks, 25-28 g, n=7-9) ^[1]
Dosage:	1.5 mg/kg
Administration:	p.o.; twice daily, for 4 days
Result:	Tofacitinib Prodrug-1 could effectively attenuate the oxazolone-induced colitis in mice.
Animal Model:	Male BALB/c mice (5-6 weeks, 25-28 g, n = 10) ^[1]
Dosage:	1.5 mg/kg
Administration:	i.g.; twice daily, for 4 days
Result:	Had no apparent influence on systemic immunosuppression in normal mice, which could decrease the risk of infection associated with tofacitinib.
Animal Model:	Kunming mice (18-22 g; n = 10) ^[1]
Dosage:	2000 mg/kg
Administration:	i.g.; single
Result:	Had low toxicity and was tolerated at an oral dose of 2000 mg/kg, and no significant change was observed in biochemical parameters and organ indexes.
