PM-43I

Cat. No.:	HY-148092		
CAS No.:	1637532-77	-4	
Molecular Formula:	C ₃₈ H ₅₀ F ₂ N ₃	0 ₁₀ P	
Molecular Weight:	777.79		
Target:	STAT		
Pathway:	JAK/STAT S	ignaling;	Stem Cell/Wnt
Storage:	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	6 months
		-20°C	1 month

SOLVENT & SOLUBILITY

In Vitro

DMSO : 35 mg/mL (45.00 mM; ultrasonic and warming and heat to 60°C)

Preparing Stock Solutions	Solvent Mass Concentration	1 mg	5 mg	10 mg
	1 mM	1.2857 mL	6.4285 mL	12.8569 mL
	5 mM	0.2571 mL	1.2857 mL	2.5714 mL
	10 mM	0.1286 mL	0.6428 mL	1.2857 mL

Please refer to the solubility information to select the appropriate solvent.

BIOLOGICAL ACTIV			
Description	PM-43I is a potent STAT6 inhibitor and can reduce STAT6 phosphorylation level. PM-43I can be used in allergic lung disease, allergic rhinitis, chronic pulmonary obstructive disease and cancer research ^{[1].}		
In Vitro	PM-43I (0.05-5 μM; 2 h) inhibits IL-4 stimulated phosphorylation of STAT6 in Beas-2B immortalized human airway cells ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only. Western Blot Analysis ^[1]		
	Cell Line:	Beas-2B immortalized human airway cells	
	Concentration:	0.05, 0.1, 0.5, 1, 2.5, 5 μΜ	
	Incubation Time:	2 h	
	Result:	Inhibited STAT6 phosphorylation level to 18%, 21% at 2.5 and 5 $\mu\text{M},$ respectively.	

Product Data Sheet

In Vivo	PM-43I (intranasal administration; 5 μg per mouse; every other day; 18 d) activity is restricted to the lung by intranasal administration ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.	
	Animal Model:	Mice injected with Ovalhumin/Alum ^[1]
	Dosage:	5 μg per mouse
	Administration:	Intranasal administration; 5 μg per mouse; every other day; 18 days
	Result:	Showed no effect on the sensisization of peripheral spleenocytes to ovalbumin.
