

## UNC0638

<b>Cat. No.:</b>	HY-15273		
<b>CAS No.:</b>	1255580-76-7		
<b>Molecular Formula:</b>	C <sub>30</sub> H <sub>47</sub> N <sub>5</sub> O <sub>2</sub>		
<b>Molecular Weight:</b>	509.73		
<b>Target:</b>	Histone Methyltransferase; Autophagy; Influenza Virus; VSV		
<b>Pathway:</b>	Epigenetics; Autophagy; Anti-infection		
<b>Storage:</b>	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	2 years
		-20°C	1 year

### SOLVENT & SOLUBILITY

#### In Vitro

1M HCl : 100 mg/mL (196.18 mM; ultrasonic and adjust pH to 1 with HCl)  
 DMSO : ≥ 30 mg/mL (58.85 mM)  
 \* "≥" means soluble, but saturation unknown.

Preparing Stock Solutions	Solvent Concentration	Mass		
		1 mg	5 mg	10 mg
	1 mM	1.9618 mL	9.8091 mL	19.6182 mL
	5 mM	0.3924 mL	1.9618 mL	3.9236 mL
	10 mM	0.1962 mL	0.9809 mL	1.9618 mL

Please refer to the solubility information to select the appropriate solvent.

#### In Vivo

- Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline  
 Solubility: ≥ 2.5 mg/mL (4.90 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline)  
 Solubility: ≥ 2.5 mg/mL (4.90 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% corn oil  
 Solubility: ≥ 2.5 mg/mL (4.90 mM); Clear solution

### BIOLOGICAL ACTIVITY

#### Description

UNC0638 selectively inhibits G9a and GLP histone methyltransferase activity with IC<sub>50</sub>s of less than 15 nM and 19 nM, respectively. UNC0638 has anti-FMDV (foot-and-mouth disease virus) and anti-VSV (vesicular stomatitis virus) activities.

#### IC<sub>50</sub> & Target

EHMT2/G9a/KMT1C

EHMT1/GLP/KMT1D

## In Vitro

UNC0638, an inhibitor of G9a and GLP with excellent potency and selectivity over a wide range of epigenetic and non-epigenetic targets. The  $K_i$  of UNC0638 is determined to be  $3.0 \pm 0.05$  nM ( $n=2$ ). Consistent with this, the Morrison  $K_i$  for UNC0638 is  $3.7 \pm 0.2$  nM ( $n=3$ ). The selectivity of UNC0638 over a wide range of epigenetic targets is evaluated. Notably, UNC0638 is inactive against other H3K9 (SUV39H1 and SUV39H2), H3K27 (EZH2), H3K4 (SETD7, MLL and SMYD3), H3K79 (DOT1L) and H4K20 (SETD8) methyltransferases, as well as PRDM1, PRDM10 and PRDM12. In addition, UNC0638 is inactive against protein arginine methyltransferases PRMT1 and PRMT3, and HTATIP, a histone acetyltransferase. Of note, UNC0638 has weak but measurable activity against JMJD2E ( $IC_{50}=4,500 \pm 1,100$  nM), a Jumonji protein demethylase and DNA methyltransferase DNMT1 ( $IC_{50}=107,000 \pm 6,000$  nM). Nevertheless, the selectivity of UNC0638 for G9a and GLP over JMJD2E is >200-fold, and selectivity for G9a and GLP over DNMT1 is >5,000-fold<sup>[1]</sup>. UNC0638 is a type of small molecule that can specifically inhibit the enzyme activity of histone methyltransferase EHMT and reduce the H3K9 dimethylation (H3K9me2) levels in cells<sup>[2]</sup>.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

## PROTOCOL

### Kinase Assay <sup>[1]</sup>

The enzymatic reactions are conducted in duplicate at room temperature for 1 hour in a 50  $\mu$ L mixture containing PKMT assay buffer, substrate coated plate, 10 M SAM, a HMT enzyme (EZH2 (800 ng/reaction), MLL (300 ng/reaction), PRMT1 (0.5 ng/reaction), SUV39H1 (75 ng/reaction) and UNC0638 (0-1.25  $\mu$ M). After enzymatic reactions, 100  $\mu$ L of first antibody is added to each well and the plate is incubated at room temperature for an additional 1 h. 100  $\mu$ L of secondary antibody is added to each well and the plate is incubated at room temperature for an additional 30 min. 100  $\mu$ L of developer reagents are added to wells and luminescence is measured using a BioTek Synergy<sup>TM</sup> 2 microplate reader. Enzyme activity assays are performed in duplicates at each concentration. The luminescence data are analyzed using the computer software, Graphpad Prism<sup>[1]</sup>.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

### Cell Assay <sup>[1]</sup>

MDA-MB-231, PC3, HCT116 cells are cultured in RPMI with 10% FBS, 22RV1 cells in alphaMEM and 10% FBS, MCF7 and IMR90 cells in DMEM with 10% FBS. Cells are grown in the presence or absence of UNC0638 (10 nM, 100 nM, 1  $\mu$ M, 10  $\mu$ M, and 100  $\mu$ M) for stated amount of time. The media is removed and replaced with DMEM 10% FBS without phenol red supplemented with 1mg/mL of MTT and incubated for 1-2 h. Live cells reduce yellow MTT to purple formazan. The resulting formazan is solubilized in acidified isopropanol and 1% Triton and absorbance measured at 570 nm, corrected for 650 nm background<sup>[1]</sup>.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

### Animal Administration <sup>[1]</sup>

Mice<sup>[1]</sup>

Standard DMPK studies in male Swiss albino mice (3 animals per data point) are conducted, following intravenous (IV, 1 mg/kg), oral (PO, 3 mg/kg), and intraperitoneal (IP, 2.5 mg/kg) administration of UNC0638.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
