BIOLOGICAL ACTIVITY

Description

RMC-6291 is an orally active and covalent inhibitor of $KRAS^{G12C}$(ON). RMC-6291 forms a tri-complex within tumor cells between $KRAS^{G12C}$(ON) and cyclophilin A (CypA). Thus, RMC-6291 prevents $KRAS^{G12C}$(ON) from signaling via steric blockade of RAS effector binding. RMC-6291 inhibits ERK signaling and induced apoptosis in KRASG12C-mutant H358 cells. RMC-6291 also inhibits the proliferation of $KRAS^{G12C}$ mutant cells with a median IC_{50} of 0.11 nM[1][2].

In Vivo

RMC-6291 (200mg/kg, p.o., qd for 60 d) significantly inhibits tumor growth and induce immunological memory in murine

tumor models[3].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
