

Afuresertib

Cat. No.:	HY-15727
CAS No.:	1047644-62-1
Molecular Formula:	C ₁₈ H ₁₇ Cl ₂ FN ₄ OS
Molecular Weight:	427.32
Target:	Akt; PKC; ROCK
Pathway:	PI3K/Akt/mTOR; Epigenetics; TGF-beta/Smad; Cell Cycle/DNA Damage; Cytoskeleton; Stem Cell/Wnt
Storage:	-20°C, protect from light, stored under nitrogen * In solvent : -80°C, 6 months; -20°C, 1 month (protect from light, stored under nitrogen)

SOLVENT & SOLUBILITY

In Vitro

DMSO : ≥ 40 mg/mL (93.61 mM)
* "≥" means soluble, but saturation unknown.

Preparing Stock Solutions	Solvent Concentration	Mass		
		1 mg	5 mg	10 mg
	1 mM	2.3402 mL	11.7008 mL	23.4017 mL
	5 mM	0.4680 mL	2.3402 mL	4.6803 mL
	10 mM	0.2340 mL	1.1701 mL	2.3402 mL

Please refer to the solubility information to select the appropriate solvent.

In Vivo

- Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline
Solubility: ≥ 2.5 mg/mL (5.85 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline)
Solubility: ≥ 2.5 mg/mL (5.85 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% corn oil
Solubility: ≥ 2.5 mg/mL (5.85 mM); Clear solution

BIOLOGICAL ACTIVITY

Description

Afuresertib (GSK2110183) is an orally bioavailable, selective, ATP-competitive and potent pan-Akt kinase inhibitor with K_is of 0.08/2/2.6 nM for Akt1/Akt2/Akt3, respectively^{[1][2]}.

IC₅₀ & Target

Akt2 2 nM (Ki)	Akt3 2.6 nM (Ki)	Akt1 E17K mutant 0.2 nM (IC ₅₀)	PKCη 210 nM (IC ₅₀)
PKC-βI	PKCθ	ROCK	

	430 nM (IC ₅₀)	510 nM (IC ₅₀)	100 nM (IC ₅₀)
In Vitro	<p>Afuresertib (GSK2110183) exhibits favorable tumor-suppressive effects on malignant pleural mesothelioma (MPM) cells. Afuresertib significantly increases caspase-3 and caspase-7 activities and apoptotic cell number among ACC-MESO-4 and MSTO-211H cells. Afuresertib strongly arrests the cell cycle in the G₁ phase. Western blotting analysis shows that Afuresertib increases the expression of p21^{WAF1/CIP1} and decreases the phosphorylation of Akt substrates, including GSK-3β and FOXO family proteins. Afuresertib-induced p21 expression promotes G₁ phase arrest by inducing FOXO activity. Afuresertib significantly enhances cisplatin-induced cytotoxicity. Afuresertib modulates the expression E2F1 and MYC, which are associated with fibroblast core serum response^[1].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>		
In Vivo	<p>Mice bearing BT474 breast tumor xenografts are dosed orally with either vehicle or GSK2110183 at 10, 30 or 100 mg/kg daily for 21 days which result in 8, 37 and 61% TGI, respectively. Mice tolerated GSK2110183 well, with 1-3% body weight loss reported after 5 days of dosing which recover over the course of the study. Other tumor xenograft models which possess an activation of the Akt pathway are explored to further demonstrate compound efficacy. Mice treated with GSK2110183 at 10, 30 and 100 mg/kg result in 23, 37 and 97% TGI, respectively, of SKOV3 xenografts^[1].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>		

PROTOCOL

Cell Assay ^[1]

MPM cells are seeded in 96-well plates (cell density, 2.5×10³ cells/well) and are incubated for 24 h at 37°C. Next, the cells are incubated in a medium containing indicated concentrations of Akt inhibitors (e.g., Afuresertib ; 50, 20, 10, 5, 2, 1, 0.5, 0.2, 0.1, and 0.01 μM) for 72 h. Next, MTT solution is added to each well, and the cells are incubated for 4 h. Finally, the cells are incubated overnight with lysis buffer (10% SDS in 0.01 mol/L hydrogen chloride). Absorbance is measured at 550 nm using SpectraMAX M5 spectrophotometer^[1].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
