

## Birabresib

Cat. No.:	HY-15743		
CAS No.:	202590-98-5		
Molecular Formula:	C <sub>25</sub> H <sub>22</sub> ClN <sub>5</sub> O <sub>2</sub> S		
Molecular Weight:	491.99		
Target:	Epigenetic Reader Domain		
Pathway:	Epigenetics		
Storage:	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	6 months
		-20°C	1 month

### SOLVENT & SOLUBILITY

#### In Vitro

DMSO : ≥ 49 mg/mL (99.60 mM)  
 H<sub>2</sub>O : < 0.1 mg/mL (insoluble)  
 \* "≥" means soluble, but saturation unknown.

Preparing Stock Solutions	Solvent	Mass	1 mg	5 mg	10 mg
	Concentration				
	1 mM		2.0326 mL	10.1628 mL	20.3256 mL
	5 mM		0.4065 mL	2.0326 mL	4.0651 mL
	10 mM		0.2033 mL	1.0163 mL	2.0326 mL

Please refer to the solubility information to select the appropriate solvent.

#### In Vivo

- Add each solvent one by one: **10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline**  
 Solubility: ≥ 2.5 mg/mL (5.08 mM); Clear solution
- Add each solvent one by one: **10% DMSO >> 90% (20% SBE-β-CD in saline)**  
 Solubility: 2.5 mg/mL (5.08 mM); Suspended solution; Need ultrasonic
- Add each solvent one by one: **10% DMSO >> 90% corn oil**  
 Solubility: ≥ 2.5 mg/mL (5.08 mM); Clear solution

### BIOLOGICAL ACTIVITY

#### Description

Birabresib (OTX-015) is a potent bromodomain (BRD2/3/4) inhibitor with IC<sub>50</sub>s ranging from 92 to 112 nM.

#### IC<sub>50</sub> & Target

IC<sub>50</sub>: 92-112 nM (BRD2, BRD3, BRD4)<sup>[1]</sup>

<b>In Vitro</b>	Birabresib (OTX-015) (500 nM) exposure induces a strong decrease of BRD2, BRD4 and c-MYC and increase of HEXIM1 proteins, while BRD3 expression is unchanged. c-MYC, BRD2, BRD3, BRD4 and HEXIM1 mRNA levels do correlate however with viability following exposure to Birabresib (OTX-015) <sup>[2]</sup> . Birabresib (OTX-015) (0.1, 1, 5 μM) treatment induces HIV-1 full-length transcripts and viral outgrowth in resting CD4 <sup>+</sup> T cells from infected individuals receiving suppressive antiretroviral therapy (ART), while exerting minimal toxicity and effects on T cell activation. Birabresib-mediated activation of HIV-1 involves an increase in CDK9 occupancy and RNAP II C-terminal domain (CTD) phosphorylation <sup>[3]</sup> .
<b>In Vivo</b>	In MDA-MB-231 murine xenografts, tumor mass is significantly (p < 0.05) reduced by Birabresib (OTX-015) (50 mg/kg) with respect to vehicle-treated animals. Birabresib (OTX-015) in combination with 2 mg/kg RAD001 shows more effective activity than Birabresib alone <sup>[4]</sup> .

## PROTOCOL

<b>Cell Assay</b> <sup>[2]</sup>	For the MTT assay, cells are seeded in 24-well plates at 1×10 <sup>6</sup> per well and treated with Birabresib (OTX-015) (0.01 nM-10 μM) for 72 h. Cells are transferred to 96-well plates and incubated with 0.5 mg/mL 3-(4,5-dimethylthiazol-2-yl)-2,5-diphenyltetrazolium bromide (MTT) in the dark at 37°C for 4 h. Cells are then lysed with 25% sodium dodecyl sulfate (SDS) lysis buffer and absorbance is read at 570 nm using a Microplate Reader. Three independent experiments are run for each cell line and untreated cells are used as negative controls. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
<b>Animal Administration</b> <sup>[4]</sup>	Mice are subcutaneously injected in the right flank with 10×10 <sup>6</sup> MDA-MB-231 cells. When average tumor weight is appr 130 mg, mice are randomized (nine animals/group) to one of the following experimental groups: vehicle (for Birabresib (OTX-015), water, twice daily, oral; for RAD001 vehicle, 5% Tween-80/5% polyethylene glycol 400, thrice weekly, intraperitoneal); 50 mg/kg Birabresib (OTX-015), twice daily, oral; 2 mg/kg RAD001, thrice weekly, intraperitoneal; 50 mg/kg Birabresib (OTX-015) + 2 mg/kg RAD001, according to the single agent dosing schedules. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
