Green Fluorescent Gelatin Methacryloyl

Target: **Biochemical Assay Reagents**

Pathway:

Cat. No.:

Please store the product under the recommended conditions in the Certificate of Storage:

Analysis.

Green Fluorescent Gelatin Methacryloyl

BIOLOGICAL ACTIVITY

Description

Green Fluorescent Gelatin Methacryloyl (Green Fluorescent GelMA) is methacryloyl gelatin (GelMA) with green fluorescence, which is obtained by "grafting" fluorescent molecules on GelMA. Green Fluorescent Gelatin Methacryloyl acts as a scaffold and can be used to engineer tissue analogs from the vasculature to cartilage and bone, allowing cells to proliferate and spread. Green Fluorescent Gelatin Methacryloyl is often used in cell culture, biological 3D printing, tissue engineering, etc $^{[1]}$
