BIOLOGICAL ACTIVITY

Description	UNC 669, a ligand for a methyl-lysine binding domain, is a potent L3MBTL1 (IC ₅₀ =4.2 uM) and L3MBTL3 (3.1 uM) inhibitor ^[1] .
IC ₅₀ & Target	IC ₅₀ : 4.2 uM/3.1 uM (L3MBTL1/L3MBTL3) ^[1]
In Vitro	L3MBTL1, a paralogue of Drosophila tumor suppressor lethal(3)malignant brain tumor (l(3)mbt), binds histones in a methylation state-dependent manner and contributes to higher order chromatin structure and transcriptional repression. Similar to L3MBTL1, the closely related protein, L3MBTL3, also contains three MBT repeats and has been shown to play a

role in meduloblastoma formation and normal hematopoiesis in humans^{[1][2]}.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
