

Mofegiline hydrochloride

Cat. No.:	HY-16677A
CAS No.:	120635-25-8
Molecular Formula:	C ₁₁ H ₁₄ ClF ₂ N
Molecular Weight:	233.69
Target:	Monoamine Oxidase
Pathway:	Neuronal Signaling
Storage:	4°C, sealed storage, away from moisture * In solvent : -80°C, 6 months; -20°C, 1 month (sealed storage, away from moisture)

SOLVENT & SOLUBILITY

In Vitro	DMSO : 110 mg/mL (470.71 mM; Need ultrasonic)					
	H ₂ O : 25 mg/mL (106.98 mM; Need ultrasonic)					
	Preparing Stock Solutions	Solvent	Mass	1 mg	5 mg	10 mg
		Concentration				
		1 mM		4.2792 mL	21.3959 mL	42.7917 mL
5 mM			0.8558 mL	4.2792 mL	8.5583 mL	
	10 mM		0.4279 mL	2.1396 mL	4.2792 mL	
Please refer to the solubility information to select the appropriate solvent.						
In Vivo	1. Add each solvent one by one: PBS Solubility: 10 mg/mL (42.79 mM); Clear solution; Need ultrasonic					
	2. Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline Solubility: ≥ 2.75 mg/mL (11.77 mM); Clear solution					
	3. Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline) Solubility: ≥ 2.75 mg/mL (11.77 mM); Clear solution					
	4. Add each solvent one by one: 10% DMSO >> 90% corn oil Solubility: ≥ 2.75 mg/mL (11.77 mM); Clear solution					

BIOLOGICAL ACTIVITY

Description	Mofegiline hydrochloride (MDL72974A) is an orally active and selective enzyme-activated irreversible inhibitor of MAO-B, with marked selectivity on the MAO-B over MAO-A with IC ₅₀ s of 3.6 nM (MAO-B) and 680 nM (MAO-A), respectively. Mofegiline hydrochloride is also an inhibitor of semicarbazide-sensitive amine oxidase (SSAO) ^{[1][2][3]} .
IC₅₀ & Target	IC ₅₀ : 3.6 nM (MAO-B), 680 nM (MAO-A) ^[1]

<p>In Vitro</p>	<p>Mofegiline hydrochloride (MDL72974A) inhibits rat brain mitochondrial MAO in a concentration and time-dependent fashion [1].</p> <p>Mofegiline hydrochloride (MDL72974A) inhibits [³H]dopamine (15 nM) uptake with an IC₅₀ value of 31.8 μM, but poorly inhibits [³H]GBR-12935 (1 nM) binding (IC₅₀ >100 μM) in the rat striatum[2].</p> <p>Mofegiline hydrochloride (MDL72974A) inhibits SSAOs from dog aorta, rat aorta, bovine aorta and human umbilical artery with IC₅₀s of 2 nM, 5 nM, 80 nM and 20 nM, respectively[3].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>																								
<p>In Vivo</p>	<p>Mofegiline hydrochloride (MDL72974A) (0.1-2.5 mg/kg; p.o.; single dose) inhibits MAO-B activity external vivo in rat model and (1.25 mg/kg; i.p.; 18 hours prior to MPTP treatment) exerts its ability to block MPTP neurotoxicity in mice model[1].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <table border="1" data-bbox="347 516 1515 856"> <tr> <td>Animal Model:</td> <td>Male Sprague-Dawley rats (150-400 g)[1]</td> </tr> <tr> <td>Dosage:</td> <td>Group 1: 0.1-2.5 mg/kg; Group 2: 0.05-5 mg/kg</td> </tr> <tr> <td>Administration:</td> <td>Oral gavage; single dose for group 1, as for group 2, once daily for 14 days</td> </tr> <tr> <td>Result:</td> <td>Shown the inhibition effect on rat brain MAO-A and MAO-B with EC₅₀s of 8 mg/kg and 0.18 mg/kg, respectively, in group 1. Resulted more potent efficacy on MAO-A inhibition in a daily dosed-manner (group 2) than single dose (group 1) manner, indicating a long half-life of Mofegiline hydrochloride.</td> </tr> </table> <table border="1" data-bbox="347 898 1515 1201"> <tr> <td>Animal Model:</td> <td>Mate SwissWebster (CF-W) mice (25-30 g)[1]</td> </tr> <tr> <td>Dosage:</td> <td>1.25 mg/kg</td> </tr> <tr> <td>Administration:</td> <td>Intraperitoneal injection; 18 hours prior to administration of MPTP (20 mg/kg; i.p.; 4 times for two-hourly intervals, for 8 days)</td> </tr> <tr> <td>Result:</td> <td>Rescued MPTP-induced decreases in striatal levels of dopamine (DA), dihydroxyphenylacetic acid (DOPAC) and homovanillic acid (HVA) in mice.</td> </tr> </table> <table border="1" data-bbox="347 1243 1515 1545"> <tr> <td>Animal Model:</td> <td>Male Sprague-Dawley rats (150-400 g) injected with Tyramine (HY-W007606) (1.25-80 μg/kg; i.v.)[1]</td> </tr> <tr> <td>Dosage:</td> <td>Group 1: 1.8, 9 mg/kg; Group 2: 0.1, 1 mg/kg</td> </tr> <tr> <td>Administration:</td> <td>Oral gavage; single dose for group 1, as for group 2, once daily for 14 days</td> </tr> <tr> <td>Result:</td> <td>Did not significantly potentiate the cardiovascular effects of intraduodenally administered Tyramine (HY-W007606) in anaesthetised rats.</td> </tr> </table>	Animal Model:	Male Sprague-Dawley rats (150-400 g)[1]	Dosage:	Group 1: 0.1-2.5 mg/kg; Group 2: 0.05-5 mg/kg	Administration:	Oral gavage; single dose for group 1, as for group 2, once daily for 14 days	Result:	Shown the inhibition effect on rat brain MAO-A and MAO-B with EC ₅₀ s of 8 mg/kg and 0.18 mg/kg, respectively, in group 1. Resulted more potent efficacy on MAO-A inhibition in a daily dosed-manner (group 2) than single dose (group 1) manner, indicating a long half-life of Mofegiline hydrochloride.	Animal Model:	Mate SwissWebster (CF-W) mice (25-30 g)[1]	Dosage:	1.25 mg/kg	Administration:	Intraperitoneal injection; 18 hours prior to administration of MPTP (20 mg/kg; i.p.; 4 times for two-hourly intervals, for 8 days)	Result:	Rescued MPTP-induced decreases in striatal levels of dopamine (DA), dihydroxyphenylacetic acid (DOPAC) and homovanillic acid (HVA) in mice.	Animal Model:	Male Sprague-Dawley rats (150-400 g) injected with Tyramine (HY-W007606) (1.25-80 μg/kg; i.v.)[1]	Dosage:	Group 1: 1.8, 9 mg/kg; Group 2: 0.1, 1 mg/kg	Administration:	Oral gavage; single dose for group 1, as for group 2, once daily for 14 days	Result:	Did not significantly potentiate the cardiovascular effects of intraduodenally administered Tyramine (HY-W007606) in anaesthetised rats.
Animal Model:	Male Sprague-Dawley rats (150-400 g)[1]																								
Dosage:	Group 1: 0.1-2.5 mg/kg; Group 2: 0.05-5 mg/kg																								
Administration:	Oral gavage; single dose for group 1, as for group 2, once daily for 14 days																								
Result:	Shown the inhibition effect on rat brain MAO-A and MAO-B with EC ₅₀ s of 8 mg/kg and 0.18 mg/kg, respectively, in group 1. Resulted more potent efficacy on MAO-A inhibition in a daily dosed-manner (group 2) than single dose (group 1) manner, indicating a long half-life of Mofegiline hydrochloride.																								
Animal Model:	Mate SwissWebster (CF-W) mice (25-30 g)[1]																								
Dosage:	1.25 mg/kg																								
Administration:	Intraperitoneal injection; 18 hours prior to administration of MPTP (20 mg/kg; i.p.; 4 times for two-hourly intervals, for 8 days)																								
Result:	Rescued MPTP-induced decreases in striatal levels of dopamine (DA), dihydroxyphenylacetic acid (DOPAC) and homovanillic acid (HVA) in mice.																								
Animal Model:	Male Sprague-Dawley rats (150-400 g) injected with Tyramine (HY-W007606) (1.25-80 μg/kg; i.v.)[1]																								
Dosage:	Group 1: 1.8, 9 mg/kg; Group 2: 0.1, 1 mg/kg																								
Administration:	Oral gavage; single dose for group 1, as for group 2, once daily for 14 days																								
Result:	Did not significantly potentiate the cardiovascular effects of intraduodenally administered Tyramine (HY-W007606) in anaesthetised rats.
