BIOLOGICAL ACTIVITY

Description	AGN-195183 (IRX-5183) is a potent and selective agonist of RARα (K _d =3 nM) with improved binding selectivity relative to AGN 193836. AGN-195183 has no activity on RARβ/γ.
IC ₅₀ & Target	IC50 value: 3 nM (Kd); 200 nM (EC80, RAR Trans)
In Vitro	AGN-195183 (IRX-5183; Compound 4) inhibits the growth of breast cancer cell lines, and is inactive in an in vivo model of topical irritation. AGN-195183 and ATRA inhibit growth of the human breast cancer cell lines, T-47D and SK-BR-3. AGN-

195183 does not cause the topical irritation induced by the RAR α -selective retinoid, Am-580. AGN-195183 is currently in Phase I/IIA clinical trials in cancer patients.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
